KITCHEN APPLIANCE COLLECTION

Welcome

Apelson Appliances with our brand CATA are specialists in the built in market committed to offering the latest in technology and design. Our proposition to the market is very unique as we offer a full suite of built in appliances that are unbranded therefore allowing our trading partners to market under their own brand or with our brand CATA.

Apelson Appliances UK Ltd is a subsidiary of the Cata Group who are a global leader in the home appliances sector with recognition across the world. The Cata Group have been developing our products for more than 70 years and strive to offer excellent products in both design and performance. Since the beginning Cata Group has been a pioneer in the domestic extraction and hob business, with a wide range of products covering all major domestic appliance categories.

Our UK head office is located in Normanton, near Castleford, West Yorkshire and it's from here we operate a fully employed and dedicated service and sales support teams, in addition to our supply chain, logistics, quality, technical, product management and marketing teams.

An endorsement of our range and its quality is the 5 year parts and 3 years labour warranty we offer on Cata branded products, with 5 year parts and 2 years labour on unbranded products.

Spanish Heritage

Cata Electrodomésticos, S.L., established in 1947 in Torelló, Spain, is a renowned leader in the household appliance industry with a rich history of innovation and excellence. As pioneers in domestic extraction, we've continuously grown our expertise. We offer a comprehensive range of high quality home appliances, including stylish cooker hoods, state-of-the-art hobs, high performing ovens, compacts, microwaves, dishwashers, washing machines, refrigerators, and wine coolers.

Our Values & Experience

Our commitment to customers drives our design and development, guided by research and an understanding of evolving needs. We create innovative, functional, efficient, durable, and reliable solutions with sustainability in mind, using premium components and cutting-edge techniques. With over seven decades of expertise, we craft each product with precision to meet the highest standards, ensuring exceptional quality and reliability.

Cata UK Service Aftercare

At Cata UK Appliances care of Apelson Appliances UK Ltd, we are dedicated to supporting the full life cycle of our products, ensuring they continue to perform at their best for years to come.

Our highly skilled, in-house Service Team are readily available to provide expert assistance whenever you need it. With a remarkable 90% first-time fix rate across our entire range, we are committed to resolving issues efficiently and effectively.

Energy Efficiency & Environment

We combine our passion for innovation with a strong commitment to the environment. At Cata, we believe your kitchen can be both stylish and energy-efficient without sacrificing performance. Driven by a vision for a cleaner, more sustainable future, we design appliances that prioritise eco-friendly operation and low energy consumption. Our products are built to reduce environmental impact, promote sustainability, and deliver real savings - benefiting both your home and the planet.

Introducing the Cata UK Collection: Designed for Every Home

We believe that quality, innovation, and affordability should work in harmony to create appliances that enhance everyday living. Our structured range - Cata 100, Cata 300, Cata 500, and Cata 700 - offers a clear path to finding the right solution for every kitchen, whether you're looking for reliable essentials or cutting-edge performance.

CATA 100

CATA 100 - Essential Performance, Everyday Reliability

Designed for practicality and efficiency, the Cata 100 range offers dependable appliances that meet the needs of modern living. With a focus on simplicity and functionality, this collection provides quality and reliability at an accessible price point, making it an excellent choice for everyday kitchens.

CATA 300

CATA 300 - Enhanced Features, Greater Convenience

Step up with the Cata 300 range, where thoughtful design meets improved functionality. This collection offers upgraded features, enhanced performance, and stylish aesthetics, providing a balance between practicality and modern innovation. Perfect for those seeking a little extra in their kitchen.

CATA 500

CATA 500 - Enhanced Design, Exceptional Performance

Blending sleek aesthetics with high-performance technology, the Cata 500 range is crafted for those who expect more from their appliances. With superior build quality, intuitive controls, and innovative features, this collection delivers efficiency and style to elevate the heart of the home.

CATA 700

CATA 700 - The Ultimate in Kitchen Innovation

The premium feel edge that your kitchen has been longing for. Sleek, seamlessly designed products that will slide straight in to your kitchen to give it the premium look.

For those who demand the very best, the Cata 700 range represents the pinnacle of kitchen technology and design. This collection redefines home cooking, ensuring unparalleled performance, durability, and elegance.

CATA OVENS – FEATURES & BENEFITS

Introduction

Discover the Cata oven range, blending versatility and innovation to transform your kitchen. Featuring single electric, double-cavity electric and gas ovens with cavities from 54 to 78 litres, our lineup suits every chef. Opt for high-spec models with pyrolytic self-cleaning for hassle-free upkeep or full touch control for seamless precision. With Cata, you get premium performance, striking design, and cutting-edge convenience, making every meal a triumph, no matter your cooking style.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

3D

The "3D" cooking function in Cata ovens uses multiple heating elements and a rear fan for even, three-dimensional heat distribution. It's great for baking multiple trays, roasting large joints, or cooking complex dishes like lasagne on all levels. Benefits include uniform cooking without tray rotation, shorter pre-heating time, faster cooking times, greater dough rise for bread, and the ability to prepare diverse foods simultaneously without flavor mixing, ideal for busy or large meals.

Easy Clean Enamel

The easy clean enamel coating in our ovens, is a smooth, non-porous finish applied to the interior that resists grease and food splatter. It prevents staining and burning-on, making it simple to wipe clean with a damp cloth, often without harsh chemicals. This means less scrubbing and maintenance time, prolonged oven cleanliness, and a hygienic surface that reduces bacteria buildup, keeping your oven in top condition with minimal effort.

Vap-Clean

The Vap-Clean function uses steam (water vapour) to loosen grease and food residue inside the oven cavity. A glass of water is poured into the oven base or into a small tray placed at the bottom of the oven. The oven heats the water to create steam that softens debris for easy wiping. Vap-Clean provides a gentler, eco-friendly cleaning method for your oven cavity.

Pyro-Clean

During the pyrolytic cleaning process the oven heats up to approximately 450°C at which the temperature is kept for 1 hour while the door is locked for safety purposes. At this temperature, residues from roasting, grilling and baking are reduced to a thin layer of ash that can simply be wiped away with a damp cloth.

Optimal Cooking

Rapid pre-heating function activates all heating elements to allow the oven to reach the selected temperature as quickly as possible.

True fan cooking to provide uniform distribution of temperature at all levels in the cavity, for even cooking of food.

Telescopic Rails

Telescopic rails are sliding metal tracks attached to the oven's interior, allowing oven shelves to extend out smoothly. They assist easy loading and unloading of heavy trays or dishes, such as roasts or casseroles, without tilting or struggling to reach the back. This allows safer handling with reduced risk of spills, easier access for checking food, and less strain on your wrists, making cooking and cleaning more convenient.

Cool Touch Door

A cool touch oven door, featuring multiple layers of glass and heat reflective coatings, stays safe to touch even during high-temperature cooking. Advantages are enhanced safety and peace of mind, with reduced burn risks, especially for households with children. It also aids a cooler kitchen environment, making it ideal for busy or family kitchens.

Active Cool

Our Active Cool system helps provide a cooler exterior surface on the oven door, thus extra peace of mind and safety for little hands even during the pyrolytic function.

Standard for our 78L Pyrolytic Built-in Ovens.

Removable Door

All Cata ovens come with removable oven doors, allowing you to take it off its hinges for easier cleaning or maintenance. This provides better access to the glass panels and frame, to remove baked on grease and grime, reducing the risk of injury and simplifying deep cleaning tasks. Removing the door also helps if there is need to replace or repair the door if damaged.

Removable Glass

A removable inner glass panel on an oven door allows you to take it out for thorough cleaning, removing grease and food splatter that builds up between layers. Benefits include easier access to hidden spots, ensuring a spotless and hygienic oven interior.

CATA MICROWAVES – FEATURES & BENEFITS

Introduction

An essential for any modern kitchen, built-in microwaves offer fast, flexible cooking and extra capacity when needed. Designed to complement our single ovens, our range includes solo microwaves, with grill and full combination models. Available in various sizes (20-31 litres) and installation options to suit wall cabinets, in column or under-counter setups, they save counter space and add a sleek, modern look to any kitchen.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Solo Microwave

Solo microwaves typically come with basic features like variable power levels, a timer, and a turntable to ensure even cooking. They are suitable for tasks such as reheating leftovers, defrosting frozen foods, and basic cooking like making popcorn or heating beverages.

Microwave & Grill

Combining microwave cooking with grilling capability, these offer more versatility than solo microwaves. They have a grill element that allows you to brown and crisp the top of dishes, and come with a grill rack to place food closer to the grill element for better browning.

Combination Microwave

The ultimate choice for those seeking a multifunctional microwave that can do it all! Combination microwaves feature microwave, grill and fan oven functions, or a combination of all three to offer unparalleled versatility. What sets them apart is their ability to circulate air and distribute heat effectively. This unique feature makes them excellent for baking delectable treats like brownies, cakes, and bread.

Stainless Interior

Stainless steel offers advantages for microwave interiors as it's a smooth, non-porous material, making it easy to wipe clean, resist stains and food residue. This helps keep the microwave fresh-smelling and hygienic. Stainless steel helps to reflect and contain microwave energy, promoting even and efficient cooking. It's also a safe material for food contact and doesn't react with food or chemicals.

Auto-Cook Menu

These are pre-set programmes for common food items designed to save you time and effort. By selecting the food type and weight, the microwave sets the appropriate cooking parameters automatically.

Touch Controls

Touch control microwaves offer a modern, sleek aesthetic and user-friendly interface, allow for easy and quick selection of cooking settings, timers, and other functions with a simple tap. By eliminating buttons and knobs, touch control microwaves create a cleaner, more minimalist appearance.

Touch Activated Door

The handle-free, touch-to-open door creates a sleek, modern look that integrates seamlessly into today's handleless cabinetry. A gentle touch activates the electronic door release, allowing the door to pop open effortlessly. Cata's Touch Activated door provides convenient, easy access to the microwave interior - even when hands are full - adding refinement and a premium feel to your kitchen.

Wall Unit Microwave

A type of built-in microwave that boasts a more streamlined depth, is designed for installing into shallower depth cabinetry such as the higher level wall units or installation within eye-level kitchen units.

In-Column Appliances

In-column layouts, where ovens and microwaves are stacked in tall cabinets, free up valuable countertop space, making cooking and prepping easier. We offer a range of built-in microwaves to suit in-column kitchen units, fitting at eye level over one of our single oven. Space-saving, ergonomic access, and a more streamlined kitchen aesthetic, makes them a great choice for modern kitchens.

45cm High Model

Ideal for replacing a 45cm compact on a budget, our brand new fully built-in 45cm high microwave can fill this space perfectly while providing all the cooking performance you need. Cata's 45cm high microwave features 31 litres of capacity, and comes fully loaded with grill and fan oven functions as well as microwave. It includes several auto-cook programmes too, so all the functionality of a compact combi but without the cost.

GAS HOB - FEATURES & BENEFITS

Introduction

Ignite your culinary passion with the Cata gas hob range, designed for every kitchen and cooking style. Available in 60cm, 77cm, and 90cm widths and with 4 or 5 burners, our hobs span from essential stainless steel designs with enamel pan supports to deluxe versions with robust full-coverage cast iron supports.

Our gas-on-glass models elevate your kitchen space with sophisticated elegance, powerful burners, exceptional safety and easy maintenance, making our gas hobs the ideal blend of function and flair.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Triple Ring

Triple ring gas burners on Cata hobs offer powerful, even heat for fast and efficient cooking. With three concentric rings of flame, they provide a wider heating area, perfect for large pans, woks, or rapid boiling.

Able to deliver intense heat, they are ideal for stir-frying or searing, while still allowing precise control for versatile dishes.

Cast Iron Pan Supports

The square section enamelled cast iron pan supports on our gas hobs deliver superior pan stability, securely handling heavy pots and pans without deflection or wobbling. Our special pan support locators ensure they stay in place when sliding pans around, and their robust construction ensures even heat distribution for consistent cooking results.

Flame Safety

The flame failure safety system on Cata gas hobs automatically stops the gas flowing if the flame goes out, ensuring your kitchen stays safe and worry-free.

Automatic Ignition

The automatic spark ignition on our gas hob makes lighting the burners quick and easy. When you push the control knob down and turn it to start the gas flow, a small electric spark is generated near the burner, instantly igniting the gas. No matches or lighters are needed!

LPG Conversion Kit

All Cata natural gas hobs come with an LPG conversion kit, letting you easily switch from natural gas to LPG for total flexibility when installing your hob. Similarly all LPG hobs come with a NG conversion kit.

Conversion must be done by a competent gas engineer, e.g. Gas Safe.

INDUCTION HOB - FEATURES & BENEFITS

Introduction

Cata induction hobs transform your cooking capabilities with lightning-fast heating and pinpoint temperature control. Offering top-notch energy efficiency, they help reduce your bills over time. Safer than gas or electric, our induction hobs stay cool to the touch, minimising burn risks, and include child locks and auto shut-off for added security. Our sleek induction hobs are easy to clean and add a touch of elegance to any kitchen.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

How Induction Works

Induction technology creates a magnetic field between the hob and metal cookware, like iron or steel pots and pans. When powered, an electric current in the hob's coils generates this field, producing eddy currents that directly heat the base of the cookware, rather than the hob surface itself. This results in rapid, precise heat control and greater energy efficiency, as minimal heat is lost in the process.

Flex Zones

Some of Cata models offer bridge zones or flex zones, allowing you to combine two adjacent cooking zones into a larger one. This feature is useful for accommodating oversized cookware such as large pans, fish kettles or griddle plates with even heat, ideal for cooking steaks or large meals.

Power Management

Induction hobs are usually hardwired in to your homes electrical system, but 13A plug-in models, designed for lower power, can be plugged into a standard UK wall socket. Note however, this may restrict the number, size, cooking power, and simultaneous use of pots and pans. Smart software efficiently manages power distribution across active zones.

Configurable Power Limit

Cata's 13A plug-in induction hobs are all configurable to set the hob to operate within specific amperage limits, typically ranging from 6A to 32A. This is achieved through settings in the hob's software, which can be adjusted during installation to limit the maximum power draw to match the circuit's capacity (e.g., 3kW for 13A or 7.2kW for 32A).

Touch Controls

All Cata's induction hobs come with an intuitive LED touch control display for effortless and precise control over cooking settings. Our touch controls come in two options - Touch Sense which uses individual touch buttons, and Touch Slider where temperature setting is as simple as sliding your finger.

Hidden Touch Controls

Invisible when hob is off, our hidden touch slider displays the controls only when you need them. Simply touch the pulsing standby button and the hob comes to life, ready to help you prepare your favourite dishes.

Pan Suitability

When using an induction hob, it's essential to choose cookware that is compatible with this type of hob. Induction hobs work by generating an electromagnetic field that directly heats the cooking vessel, so the cookware must have magnetic properties for it to work effectively. To check compatibility, simply see if a magnet sticks to the bottom of the pan.

Precise Temp Control

Take advantage of the precise temperature control offered by our latest induction hobs. Cata's latest induction technology provides perfectly smooth power delivery, so you can adjust the heat level to suit your cooking needs accurately, whether it's simmering delicate sauces or searing meats at high temperatures.

Boost Function

Our induction hobs include a boost or double boost function that temporarily increases power to a cooking zone for rapid boiling or intense searing. Once the boost period ends, the hob automatically returns to the previously set power setting, ensuring precise control and preventing overheating. The booster improves efficiency, enhances cooking precision, and helps energy savings by reducing cooking time.

6 Zone Hob

With six distinct cooking zones, our new Cata 90cm 6-zone induction hob helps elevate your cooking game. The three flex zones seamlessly combine pairs of zones into larger cooking areas, effortlessly accommodating oversized pots and pans. This versatile design delivers unmatched flexibility, precision, and power.

Warming Functions

Activate one of up to four warming functions built in your Cata induction hob, cook according to your taste...

Melt - 42°C for melting butter, chocolate or warming up milk without burning.

Defrost - 55°C to gently thaw food in the pan.

Keep Warm - 70°C keeps pre-cooked food warm before serving.

Simmer - 90°C maintains a gentle boil, ideal for purée, rice, pasta or vegetables.

CATINDE60HF

4 ZONE PLUG-IN FLEX INDUCTION HOB

CATA 700

KEY FEATURES

60cm Width • 4 Cooking Zones with 2 Flex Zones
Power Management System - Configurable for 13-32A
Hidden Touch Slider Control with White LED Display
9 Power Settings + 2 Boost Settings
Highest Quality Schott Ceran® Glass

SPECIFICATION

- Black glass
- Cooking timer
- Child safety lock
- 4 preset warming functions for precise temp control
 - Melt (42°C)
 - Defrost (55°C)
 - Keep warm (70°C)
 - Simmer (90°C)
- 3 Cooking modes - Chef, Grill and BBQ
- Pause, recall, pot move and pasta/rice functions
- 2.8kW default power (configurable up to 7.2kW)
- Cable with UK plug (32A connection)
- Supplied with hardwire cable (32A connection)
- W590 x D520 x H60 mm
- Cut-out W565 x D495 mm
- Sustainable packaging

BENEFITS

The "Pot Move" function takes the hassle out of cooking by allowing the heat to follow your pan. When activated, this feature remembers your heat settings and automatically adjusts them as you move the pan across different zones of the hob. Slide a pot forward to increase the heat, or move it back to simmer, without pressing a single button.

ACCESSORIES

GRILL2 - Induction Griddle

This cast iron griddle, designed for Cata induction hobs with bridgeable zones, offers excellent heat distribution and retention for flavourful cooking. Its non-stick surface is ideal for vegetables and meats, promotes healthier cooking, and is dishwasher-safe for easy cleanup.

- 10.8kW total power
- Cable without plug (50A connection)
- W900 x D520 x H60 mm
- Cut-out W875 x D495 mm
- Sustainable packaging

BENEFITS

"Chef Mode" on our induction hobs is designed for professional-style cooking at home. This intelligent feature divides the hob into preset heat zones - typically high, medium, and low - so you can move pans across the surface without adjusting the temperature manually. Sear, simmer, and keep warm all at once by simply shifting your cookware from one area to another.

VENTED HOB - FEATURES & BENEFITS

Introduction

Experience superior ventilation with our venting downdraft hobs. These sleek and efficient appliances seamlessly combine induction cooking with powerful ventilation, revolutionising the way we prepare our favourite dishes. Engineered to eliminate cooking fumes, grease and odours effortlessly. The filtered air can be recirculated back into the kitchen or vented outside through ducting to ensure a clean and comfortable cooking atmosphere.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Space Saving Design

Cata has developed our most compact vented hob platform yet, with a height of only 17cm. The most compact built-in height on the market!!

Rearward Outlet

Our specially developed telescopic ducting with wooden edge protection aids installing the venting hob for recirculation or external ventilation. Choose from our two vent kits - our flexible ducting kit for recirculation of air back into the kitchen, or our external ducting kit which comes with external wall vent.

Compact Installation

The integration of the downdraft ventilation system into the hob eliminates the need for a separate overhead range hood, saving valuable kitchen space and creating a cleaner, uncluttered look. And because filtered air is directed rearwards to keep the overall height to a minimum, this allows extra space beneath the hob for full depth drawers.

Patented Extraction System

The ultra low height is achieved with the use of our innovative and patented flat fan motor, that delivers high energy efficiency, powerful airflow and yet keeps noise low despite of its compact size.

Grease Filter

The aluminium mesh filter basket removes greases from the cooking fumes, captures and removes grease particles from the air during cooking, preventing them from accumulating in the hood or exhaust system.

And to make life easier, its washable and can even be put in the dishwasher.

Recirculation Filters

Activated carbon filter blocks act as a second line of filtration, and are highly efficient at removing cooking odours. The blocks can be regenerated after 6 to 9 months use, by baking them in the oven for around 1 hour at 120°C, to extend their life up to 5 years!

Liquid Tank

Our cleverly designed liquid tank is there to capture any spilled-water or condensate safely. Liquid is contained in the easy-to-remove tank and features a drainage hole with cap, to allow you to drain off the majority before removal.

Touch Controls

All of Cata vented induction hobs come with an intuitive LED touch control display for effortless and precise control over cooking settings. Our touch controls come in two options - Touch Sense which uses individual touch buttons, and our Touch Slider where temperature setting is as simple as sliding your finger.

Hidden Touch Controls

Invisible when hob is off, our hidden touch slider displays the controls only when you need them. Simply touch the pulsing standby button and the hob comes to life, ready to help you prepare your favourite dishes.

Boost Function

Our vented hobs include a boost function, temporarily boosts suction power to quickly remove strong odors or smoke. It ensures rapid removal of grease and steam, maintaining a cleaner environment. After the boost time is up, the extractor will automatically revert to a lower setting, preventing unnecessary power use.

Warming Functions

Activate one of up to four warming functions built in to your induction hob, allowing you to cook according to your taste.

Melt - 42°C for melting butter, chocolate or warming up milk without burning. Defrost - 55°C to gently thaw food in the pan.

Keep Warm - 70°C keeps pre-cooked food warm before serving.

Simmer - 90°C maintains a gentle boil, ideal for purée, rice, pasta or veg.

Flex Zones

All of our vented hobs feature bridge zones or flex zones, allowing you to combine two adjacent cooking zones into a larger one. This feature is useful for accommodating oversized cookware such as large pans, fish kettles, griddle plates, or multiple dishes with even heat, ideal for cooking steaks or large meals.

VENTED HOBS

ICONFLEX75DD

4 ZONE FLEX VENTED IND. HOB

HOODS

COOKER HOOD - FEATURES & BENEFITS

Introduction

Transform your kitchen with the Cata cooker hood range, where style meets superior performance. Choose from many styles, including box, angled glass, chimney, integrated, canopy, curved glass, downdraft, telescopic, ceiling or island, and available in widths ranging from 52cm to 90cm (depending on model) to suit any layout. Boasting airflow from 200m³/h to 640m³/h, our hoods they deliver powerful, energy-efficient yet quiet extraction, maintaining a fresh and calm cooking space.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Airflow Rate

The extraction rate you need for a cooker hood depends on your kitchen size, cooking style, and how often you cook. A good rule is to aim for a rate of at least 10 times your kitchen's volume per hour - so a 50 cubic metre kitchen needs at least 500 m³/h. If you cook strong smelling foods or use high heat often, consider a hood with higher airflow to clear fumes, steam, and odours effectively.

How to Calculate Your Room Size

To calculate the volume of a room, you need to measure its length, width, and height, then multiply these three dimensions together. Ensure all measurements are in the same unit (e.g., metres) before multiplying. Make sure to include any recesses or dining, family or living areas, if you have an open plan room. Example, if a room is 5 metres long, 4 metres wide, and 2.5 metres high, the volume would be: 5m x 4m x 2.5m = 50m³ (cubic metres).

Room Size Guidance

Whether you're working with a compact layout or a large open-plan design, there's a Cata hood with the ideal performance and style to complete your kitchen. To help your decision process, we have added an icon to each hood to determine what size kitchen (small, medium, large or extra large), that particular hood would be ideal for.

< 250 m³/h

250 - 450 m³/h

450 - 700 m³/h

> 700 m³/h

Extraction

When setup for venting or extraction, a cooker hood pulls kitchen air, loaded with cooking fumes, smoke, and odours, and pushes it outside through a duct or vent. It's one of the best ways to clear pollutants and keep your kitchen fresh. You'll need a duct system installed to an outer wall or roof for it to work though.

Recirculation

A cooker hood setup to recirculate filters kitchen air and sends it back into the same room. It traps grease and particles typically with a mesh filter, then captures the odours in a carbon filter before it releases the cleaned air. Advantage is no external vent needed, which makes setup a breeze - perfect for kitchens where ducting isn't an option.

Touch Controls

Touch control on Cata cooker hoods offer a sleek, modern way to adjust settings like fan speed and lighting with a simple tap. It's intuitive and responsive, making operation effortless, especially during busy cooking. The flat, button-free surface is easy to clean, preventing grease buildup, and adds a stylish, high-tech look to your kitchen while enhancing functionality.

Hidden Touch Controls

Invisible when the hood is off, our hidden touch displays the controls only when you need them. Simply touch the red standby button and the cooker hood comes to life, ready to help you ventilate your kitchen.

Gesture Control

Meet the new Cata 700 Black Glass canopy hoods with Gesture Control. A built-in gesture sensor lets you adjust fan speeds and lighting with a hand wave - no touching required. No more fiddling around under the canopy trying to locate the controls, it's also perfect when your hands are messy from cooking, keeping things hygienic and hassle free.

Boost Function

Some Cata cooker hoods include a boost function, designed to deliver maximum extraction power when you need it most. Whether you are stir frying, searing meat or cooking big meals, our boost function ensures that steam and smoke are quickly and effectively extracted, ensuring your kitchen stays fresh and clean.

Black Filters

An aluminium grease filter in a cooker hood traps grease and smoke, keeping your kitchen air clean and the hood's motor safe. It's durable, reusable, and easy to clean. Cata's all-black aluminium filters add a stylish, modern twist while delivering top-notch performance - perfect for adding a modern vibe to your kitchen.

Ambient Lighting

Illuminate your culinary creations with energy-efficient LED lighting. In addition to the LED downlights, some of our cooker hoods feature subtle LED decorative lights, adding a stylish touch and ambiance to your kitchen.

BLDC Motor

Many of Cata's cooker hoods feature BLDC motors, which provide several advantages compared to traditional AC motors. Unlike brushed motors, which use mechanical brushes and a commutator, BLDC motors employ an electronic controller to switch DC currents, creating rotating magnetic fields that the permanent magnet rotor follows. This design provides higher energy efficiency, quieter operation, longer lifespan, and better performance.

HIGH QUALITY COOKWARE

GRILL2

GRIDDLE FOR INDUCTION HOBS

Griddle with ease using the GRILL2, designed for Cata induction hobs with bridgeable zones. Made from highest quality cast iron with a non-stick surface, it ensures excellent heat distribution and retention, preserving moisture and flavour. Perfect for vegetables and meats, its non-stick surface promotes healthier cooking and pop it in the dishwasher for easy cleanup.

L432 x W229 x H40 mm

CATA 300

GRILL3

REVERSIBLE GRIDDLE FOR GAS HOBS

Achieve a seared, restaurant-style finish with the GRILL3 griddle. Crafted from high-quality cast iron with a non-stick surface, it's user-friendly and dishwasher-safe. Place it on your gas hob's pan support to cook multiple items simultaneously. This dry-fry griddle requires no oil or fat and is reversible, featuring a flat side and a ridged side that drains fat for healthier cooking.

L390 x W200 x H15 mm

CATA 300

GRILL4

CAST IRON SQUARE SKILLET

Discover our GRILL4 premium cast iron skillet, a must-have for home cooks. Crafted for durability from high-quality cast iron, it offers excellent heat retention and even cooking. Its non-stick surface with high ridges drains fat, and dual spouts enable drip-free pouring. Easy to cook with and clean, it features sturdy handles for a secure grip. The square shape excels at searing, sautéing, and frying, from bacon to steaks.

L323 x W273 x H53 mm

CATA 300

WOKRING1

CAST IRON WOK SUPPORT

The WOKRING1 wok support offers additional stability when using a round bottom wok. Suitable for most Cata gas hobs. This is the perfect accessory for lovers of oriental cuisine.

CATA 300

WOKSSI

PREMIUM WOK PAN

Crafted from durable, scratch-resistant stainless steel, the WOKSSI wok pan is built to last and easy to clean, resisting stains and odours. Its flat base ensures even heating for perfectly cooked meals, while its large capacity is ideal for family dinners or entertaining. Versatile for ceramic, induction, or gas hobs, this non-reactive pan supports healthy cooking without altering flavours. With a sleek, modern design and sturdy, comfortable handle, it's a stylish and practical addition to any kitchen.

CATA 300

PANSET1SS

PREMIUM 3 PIECE PAN SET

Elevate your cooking with the PANSET1SS 3-piece pan set, designed for home chefs who crave excellence. Made from commercial-grade stainless steel with a heavy-gauge, impact-bonded aluminum base, these pans ensure lasting durability and even heat distribution for flawless results. Ergonomic, riveted handles with an anti-slip satin finish offer a secure, comfortable grip. Versatile across all cooking surfaces—electric, gas, induction, and ceramic - this set is perfect for everything from stir-fries to sauces.

WINE COOLERS

WINE COOLER - FEATURES & BENEFITS

Introduction

If you're passionate about the taste and quality of your wine, then investing in a cooler is an absolute must. No matter how well stocked or neat your fridge may be - there are still temperature fluctuations that can ruin even some of life's finest bottles of vino. So take control over preserving aging wines with one of Cata's specialised and stylish wine coolers, designed to keep them at optimal levels for maximum enjoyment!

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Flexible Location

All Cata freestanding wine coolers are designed to give you total flexibility on where you position your cooler. Either fitted under the kitchen worktop with adjacent cabinetry, or if you prefer, used freestanding anywhere in your living space. Just select a location that is well-ventilated, away from direct sunlight, and free from excessive heat sources or extreme temperature fluctuations.

Bottle Storage

Our beech wood shelves are excellent at absorbing vibrations from the compressor and other sources, which can disturb the sediment in wine bottles and potentially affect their taste. The wooden shelves can accommodate 750ml Bordeaux, Burgundy and Champagne bottles. Larger bottles can also be stored, but take care not to overcrowd the shelves, and remember to maintain proper spacing between bottles for air circulation and easy access.

Touch Controls

Our wine coolers feature intuitive LED touch controls with a stylish, compact design, offering bright, easy-to-read displays for precise temperature control. LED technology boosts energy efficiency with lower power use than traditional displays, and the option to switch between °C and °F adds user convenience.

On Door Touch Controls

The Cata 45cm high built-in column wine cooler features on-door touch controls with a sleek blue-white LCD display for easy temperature management. The intuitive touch interface offers a modern look and precise adjustments necessary for wine storage, without need to open the door and disturb the wine storage environment. The keylock function prevents accidental changes to your settings.

UV Protection

Cata wine coolers all feature toughened UV-protected glass as standard, to stop wine aging prematurely. UV-protected glass ensures that your wines are shielded from harmful UV rays, preserving their quality, colour, flavour and aroma. A simple yet crucial feature to ensure every bottle stays as delicious as intended.

Charcoal Filter

An active charcoal filter eliminates odours and impurities in the air, preventing contamination of your wine collection. Our 30cm and 60cm freestanding models feature a charcoal filter, to best protect your precious wine.

Even Temperature

The fan in the rear of our wine coolers circulates cool air for even temperature distribution. The fan gently moves cool air around, preventing hot spots or cold patches that could harm your bottles - especially important for consistent aging. It also helps maintain stable humidity, reducing the risk of cork drying out.

Reversible door

Our freestanding wine cooler range feature reversible doors that offer flexibility for your kitchen setup. By default, the doors hinge on the right, but you can switch them to open from the left. This lets you place the cooler wherever it fits best, allowing you easy access to enjoy your wine collection.

Dual Zones

Cata wine coolers with dual cooling zones let you store different wines at their perfect temperatures in one unit. Featuring two separate sections each with its own temperature control - one zone can chill whites or rosés at a crisp 4-13°C, while the other keeps reds at a cozy 13-18°C. It's smart, space-saving convenience for wine lovers.

REFRIGERATION - FEATURES & BENEFITS

Introduction

Our integrated cooling appliances are designed to seamlessly blend into your kitchen cabinetry, offering a stylish and cohesive look that deliver seamless integration to complement your interior design. With features such as adjustable shelves, large freezer drawers, humidity control VitaMod crispers, digital dual temperature controls, and total no frost technology, we make storing, preserving and accessing your food and beverages effortless.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Reversible Doors

All of Cata's integrated refrigerators allow the door hinges to be switched to open from either the left or right side, offering flexibility in placement and accessibility. This helps accommodate different kitchen layouts, ensuring easy access in tight spaces or corners. It also suits user preferences (e.g., left- or right-handed individuals) and can prevent obstruction of nearby appliances or walkways, improving convenience and functionality.

Sliding Door Mechanism

A fridge sliding door mechanism is a clever setup that lets an integrated fridge door glide open smoothly while staying attached to your kitchen cabinetry. When you pull the cabinet handle, the door slides along a rail system fixed to the cabinet door.

Fixed Hinge Mechanism

Cata's fixed hinges are perfect for door-on-door installation of integrated refrigerators, where a décor kitchen cabinet panel is mounted to the front of the appliance door, so opening as one unit. Our fixed hinges ensure a strong connection, with enhanced durability, better energy efficiency, quieter operation, and a seamless, flush look perfect for modern integrated kitchens.

VitaMod Crisper

Thanks to a special light source close to the natural spectrum of sunlight, VitaMod ensures that fruits and vegetables stored in the refrigerator continue their natural ripening process, thus preserving their nutritional values at higher levels.

Humidity Controlled Crisper

The fridge's salad crisper with humidity control extends produce freshness by optimizing moisture. High humidity (80-95%) keeps greens like lettuce crisp, while low humidity (50-60%) prevents rot in fruits like apples. It preserves texture, nutrients, and reduces waste. Adjustable vents and our special filter customise storage for longer-lasting produce.

Total No Frost

Our new Total No Frost refrigerators keep air flowing evenly in both the fridge and freezer, stopping moisture build-up - no more soggy salads or iced up freezer walls. With dual independent air systems, featuring separate fans and evaporators, there's no air transfer between compartments. This ensures perfect freshness, ideal humidity, no odour mixing, and pure food flavours in each section.

Frost Free

Models with our Frost Free technology prevent ice build-up, reducing the need for manual defrosting and ensuring a consistent temperature. Our frost free models have separate air circulations - fan circulated in the freezer and natural circulation in the fridge - and a heater that will melt the ice, at specific intervals, maintaining efficiency meaning no need for manual defrosting.

Low Frost

Thanks to the wrap around evaporator, our Low Frost cooling technology offers more efficient cooling, less manual defrosting, and more flexible storage space.

Freezer Shield

Conventional refrigerator appliances are able to work at a minimum ambient temperature of 10°C. However, with our Freezer Shield technology, Cata appliances can work even if the ambient temperature is as low as -15°C, which makes it possible to place the appliances in closed locations such as the garage.

Turbo Fan

Several of our refrigerators have a turbo fan, which is a small, high-speed fan designed to boost air circulation and evenly distribute cold air across all shelves and corners, eliminating any warm spots. This helps food stay fresher longer, especially in larger or packed fridges. The turbo fan also speeds up cooling after the door's been opened, cuts down on frost buildup, and runs quietly, making your fridge more efficient and reliable.

Metal Cooling

Our newest cooling models feature a chic, high-performing metal cooling wall, crafted from stainless steel for better efficiency. The metal cooling wall conducts cold air faster and more evenly than plastic-lined fridges, maintaining consistent temps across shelves, cutting warm spots to keep food fresher longer. Durable, easy to wipe down, and with a modern, premium vibe, it's a standout feature.

LAUNDRY FEATURES & BENEFITS

Introduction

Discover the perfect blend of efficiency and elegance with our integrated washing machines. Whether you're tackling tough stains or caring for delicate fabrics, our machines are designed to deliver exceptional performance with every cycle. Featuring advanced functionalities like a variety of wash programmes, water and energy-saving modes, and user-friendly controls, you can customise each wash to your specific requirements.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Digital Display

Included on all Cata models, the clear digital display shows the programme time, temperature, spin speed, delay timer and any extra functions you have selected.

Steam Assist

The Steam Assist function on the our washing machine improves laundry by adding steam to the cycle. It deeply penetrates fabrics to remove tough stains like wine or grass without chemicals, sanitizes by killing bacteria and allergens - ideal for bedding or sensitive skin - and reduces wrinkles, minimising ironing.

ECO-Logic Half Load

Our latest generation of laundry appliances include this clever technology. The machine can detect whether it is half-loaded or not, if it is energy consumption is automatically reduced by up to 50%. Additionally, water consumption and program duration are dramatically decreased. (UBV models only)

Aquaball

The Aquaball feature on Cata's latest laundry machines is a special ball valve designed to maximise detergent efficiency and minimise detergent waste. It prevents up to 30% of detergent from being pumped away with the dirty water during the wash cycle. This ensures nearly all detergent is used to clean your clothes. (UBV models only)

Allergy Care

The allergy care feature on our washing machines removes all allergens on the laundry and provides hygienic drying performance. It reduces allergens like dust mites and pollen using high temperatures washing, extra rinses, and sometimes steam to kill bacteria and remove irritants. It's ideal for sensitive skin or allergy sufferers, ensuring cleaner, safer laundry.

DISHWASHER FEATURES & BENEFITS

Introduction

Add sleek sophistication to your kitchen with Cata's fully integrated dishwashers, designed to blend seamlessly behind full-height furniture doors for a minimalist look. Easy to use, the controls reveal themselves only when the door is opened, and installation is simple with just a decor door and base plinth needed.

Choose between a slimline 45cm or spacious 60cm models, our latest packed with features like topcutlery tray, LED interior lighting, floor status light, sliding doors, rapid wash, turbo drying, quiet 45dB operation and upto 16 place setting capacity.

* Note - not all features are available on all Cata models, please refer to individual model specs for details.

Sliding Door

The sliding door system uses a hinge that attaches the dishwasher door to the cabinet door, allowing the cabinet door to slide upwards when the dishwasher door is opened. It eliminates the need to cut a hole or notch in the baseboard or plinth, ensuring a clean and seamless look.

Interior Lighting

Our Cata 500 models feature an internal LED light which brightens the interior, making it easier to load and unload dishes, especially in dim kitchens or at night. It helps you spot missed spots, ensure proper placement for cleaning, and check for leftover food or detergent residue. This small feature boosts convenience, improves cleaning accuracy, and ensures nothing gets overlooked, saving time and effort.

Adjustable Upper Basket

The upper basket can be repositioned higher or lower, depending on your needs. On Cata 300 models this is when the basket is unloaded, but on our new Cata 500 models, the upper basket has 3 level adjustment and can be raised or lowered even when loaded.

Flexi-Tray Top Rack

The upper cutlery tray is designed to place forks, spoons and knives, long utensils and small items. With our Flexi-Tray it is possible to slide sections over each other, to create an extra height for taller glasses, dishes or pans in the upper basket.

Floor Status Light

Our new Cata 500 models feature a floor LED status light, which shows you the status of the wash cycle. Red light when programme is running, and green when the programme has completed.
