

THE WORLD HAS IDENTIFIED THE PROBLEM. NO ONE HAS BUILT THE INFRASTRUCTURE.

Agentic AI is moving from information retrieval to autonomous action.
Yet every major policy, legal, and economic report reaches the same conclusion:
The infrastructure required for AI-to-AI commerce does not yet exist.

WHAT THE REPORTS AGREE ON

OECD (2025)

- Agentic AI will transform global markets
- Autonomous agents will execute tasks
- Liability remains unresolved

UK Competition & Markets Authority (2026)

- AI agents will transact on behalf of users
- AI agents will make payments
- Secure digital identity is required

Global Legal Community

- Agent-to-agent interaction is accelerating
- Authorization and accountability remain unclear
- Governance frameworks remain incomplete

WHAT IS STILL MISSING

Without these six layers,
**AI cannot participate in
global commerce at scale.**

THE CONSEQUENCE OF MISSING INFRASTRUCTURE

AI AGENTS WANT TO TRANSACT.
BUT THEY CAN'T.

Fragmented systems. No trust.
No accountability.
No global commerce at scale.

The Internet created

Capital Markets created

THE SIX LAYERS OF AI COMMERCE

A complete infrastructure stack is required for AI agents to transact, settle, and operate in **global commerce**.

WORLD BLOCKCHAIN BANK™
FINANCIAL IDENTITY INFRASTRUCTURE

World Blockchain Bank
Financial Identity Infrastructure™
delivers all six layers through:

Financial Identity Namespaces™

Programmable, human- and machine-readable financial identities for every entity and function.

DomainLink™

The identity resolution layer that connects names, entities, and services globally.

WorldBankPay™

The payment and settlement network for agent-to-agent and machine-to-machine transactions.

Verified Agent Identities

Cryptographic verification of AI agents with delegated authority and traceability.

Compliance Frameworks

Built-in KYC, AML, sanctions, and regulatory compliance at the infrastructure layer.

Arbitration Connectivity

On-chain and off-chain dispute resolution connectivity for trusted outcomes.

SIX LAYERS. ONE INFRASTRUCTURE.

QUESTIONS EVERY EXECUTIVE SHOULD BE ASKING™

Who owns our AI identities?

How will AI systems verify they are interacting with an authorized corporate entity?

How do AI agents identify our company?

What becomes the machine-readable identity standard for autonomous systems?

How are payments routed?

How do AI agents securely initiate, authorize, and route financial transactions?

How are supplier interactions authenticated?

How do autonomous procurement systems verify vendors, contracts, and settlement instructions?

How is treasury activity verified?

How are liquidity management, settlement operations, and financial controls represented in AI-native environments?

How are autonomous transactions governed?

What identity framework determines permissions, authority, and accountability for machine-executed actions?
