

Reimagining Legal Productivity with Protégé™:
Canada’s Personalized
Legal AI Assistant

Developed by LexisNexis® Canada and launched commercially in July 2025, Protégé isn’t just an upgraded feature — it’s a leap forward in legal technology, one that combines intelligent drafting, research, and analysis in one secure, integrated experience. Whether you’re in private practice, in-house counsel, or government service, Protégé transforms how you work, bringing context-aware support into your drafting, research, and document workflows, all tailored to your role and jurisdiction.

BUILT FOR HOW YOU WORK

Protégé is designed to mirror how legal professionals research, draft, and make decisions. Integrated into the Lexis+ AI and Lexis® Create+ platform, it offers a seamless experience that understands your practice area, writing style, and the legal standards that guide your work. Protégé connects directly to trusted LexisNexis legal content and can also integrate with your firm’s document management system (DMS), giving you access to your own clauses, and client materials without switching platforms.

For trial lawyers, this means you can quickly generate first drafts of motions, letters, and memos based on case-specific documents or natural language prompts. You can rephrase or adapt those drafts using intuitive in-app editing tools — no copy-pasting or toggling between tabs required. And because you can give Protégé access to documents from your Vault, the outputs are not only fast but are grounded in your own work product.

FROM RESEARCH TO RESULTS, FASTER

Trial lawyers often lose hours to foundational but time-consuming work: searching for case law, sifting through precedents, or drafting early versions of discovery and deposition materials. Protégé addresses these bottlenecks directly. You can describe what you need in natural language: “Draft a motion for summary judgement...” and provide the fact pattern and Protégé returns a tailored draft in seconds.

Its advanced legal reasoning tools break down complex questions into logical steps and generate citations grounded in the authoritative LexisNexis content. If you’ve uploaded related case documents into a

In the fast-evolving world of legal practice, time is both a premium and a pressure point. Trial lawyers face increasing demands for precision, responsiveness, and strategic insight, yet the tools they’ve long relied on are not keeping pace. Enter Protégé™ for Lexis+ AI™, a personalized AI assistant built for Canadian legal professionals who want to work faster, deliver higher-quality output, and stay ahead in a profession that rewards both speed and excellence.

Vault, the results will reflect the facts of your matter, ensuring that the insights and suggestions are not just relevant, but specific to the case at hand.

And for those managing large volumes of documents or case files, the Vault functionality enables secure upload and analysis of up to 500 documents per workspace. Protégé then helps you organize and extract meaning from these materials, highlighting key facts, surfacing case-critical timelines, and suggesting next steps in your drafting or research.

DRAFT SMARTER, WITH SPEED AND PRECISION

Protégé’s drafting tools help legal professionals create full documents; motions, agreements, memos, letters, and more, using a natural language prompt. Whether starting from scratch or drawing from a personalized Vault, outputs are tailored to your style, and jurisdiction.

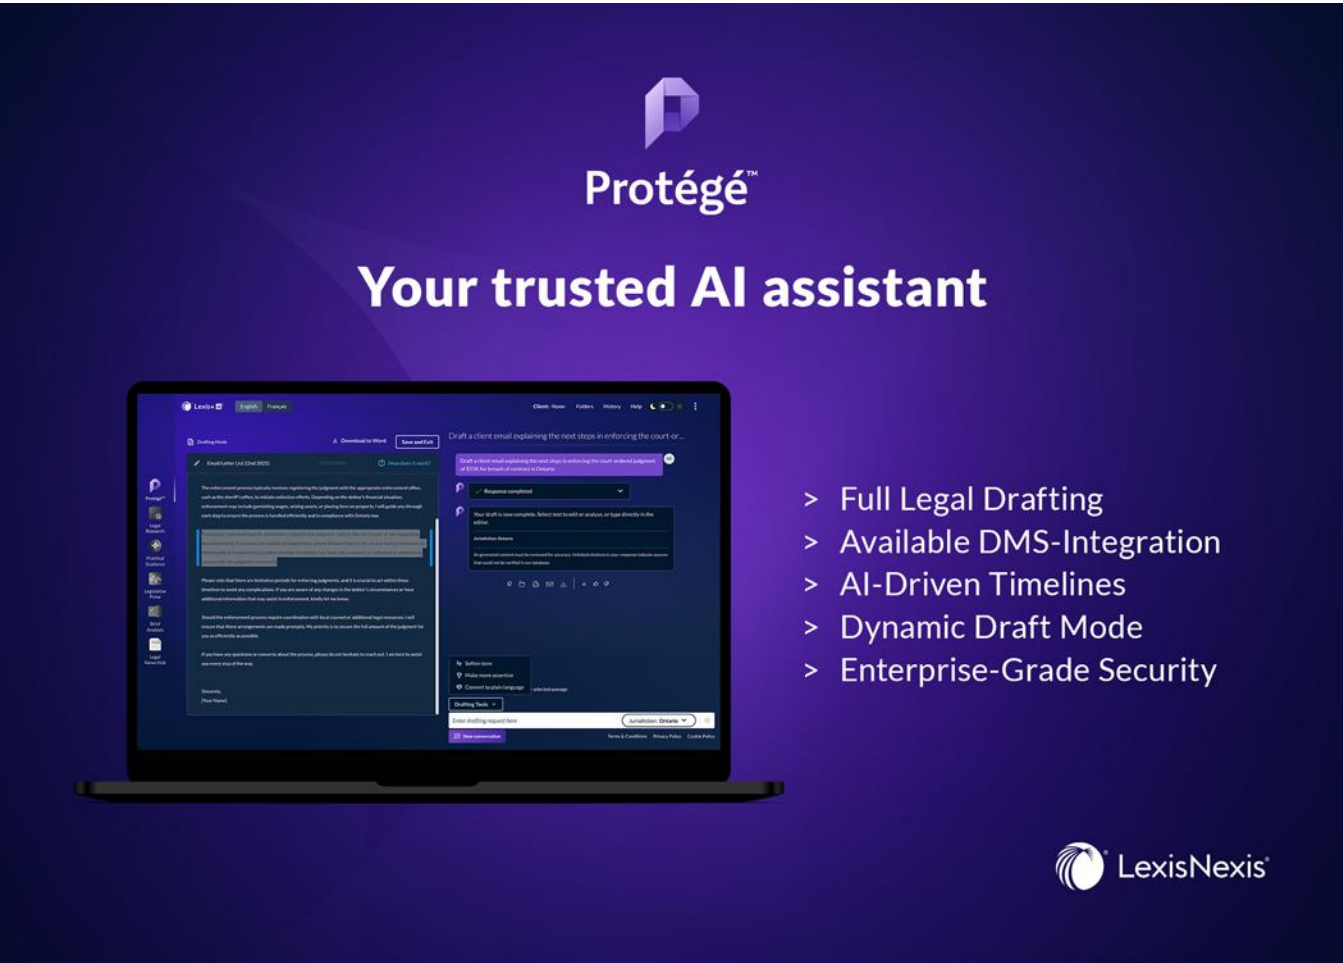

It supports over 40 types of transactional agreements, from NDAs to leases, making it easy to generate complex drafts quickly. Draft Mode allows you to simplify, expand, or adjust tone without leaving the document. You can even convert content to plain language or swap in alternative language with a click.

Protégé integrates with platforms like iManage and SharePoint, giving you direct access to firm-preferred language. This ensures consistency, saves time, and reduces errors.

PERSONALIZED FOR PRECISION

Unlike generic generative AI tools, Protégé isn’t just an assistant — it’s your assistant. Upon first use, you’ll be guided through a brief onboarding flow where you can personalize your experience by selecting your role type, preferred tone, and jurisdiction. From there, Protégé adapts its responses to reflect your preferences, adjusting the depth, formality, and jurisdictional language when drafting full documents.

This personalization is particularly impactful for lawyers balancing speed with consistency. Protégé maintains your drafting tone across documents and supports dynamic drafting styles like “Focused,”

- > Full Legal Drafting
- > Available DMS-Integration
- > AI-Driven Timelines
- > Dynamic Draft Mode
- > Enterprise-Grade Security

“Expansive,” or “Dynamic.” Whether you’re preparing for trial, writing to opposing counsel, or communicating with a client, you stay in control of the tone and quality, while Protégé handles the manual tasks.

SECURITY YOU CAN TRUST

For legal professionals, security and privacy aren’t optional — they’re non-negotiable. Protégé is developed with enterprise-grade safeguards from the ground up, including SOC 2 audits, AES-256 encryption, and TLS 1.2 for data in transit. It operates within Canada and the EU, keeping data residency and client confidentiality aligned with professional obligations.

Critically, your data is never used to train third-party models, and personalization is fully opt-in and adjustable at any time. You can choose to turn off style-based personalization, redact documents, or work within a non-retentive session. In short, Protégé is a tool you control, not one that mines your data behind the scenes.

BUILT FOR CANADIAN LAWYERS, BACKED BY LEXISNEXIS

Trial lawyers know the stakes of legal nuance. Protégé accounts for court formatting and jurisdictional preferences, ensuring that every citation and recommendation is grounded in trusted, verifiable sources.

This is not a mass-market AI tool retrofitted for legal use. It is purpose-built for lawyers, and even more specifically, for Canadian lawyers navigating a bilingual, rapidly evolving legal landscape.

A FUTURE-PROOF INVESTMENT IN LEGAL EXCELLENCE

The long-term LexisNexis vision for Protégé is bold: to provide every legal professional with an AI assistant that evolves alongside their career and practice. What began as an intelligent drafting and research companion is becoming a full-spectrum assistant — capable of helping with client intake, deadline tracking, time capture, and beyond.

Protégé is already making a measurable impact. Early U.S. testing showed time savings, better first drafts, and fewer revisions. From solo lawyers to large firms and in-house teams, Protégé boosts quality, efficiency, and compliance — without added overhead.

TRY PROTÉGÉ IN LEXIS+ AI TODAY

Whether you're juggling litigation, court deadlines, or a heavy drafting workload, Protégé is ready to help.
