Company Update

Summer 2025

PRINT FOR A SUSTAINABLE FUTURE

At Zenith we recognise our responsibilities to operate in a manner which minimises the impact we have on the environment and to ensure our operations are as sustainable as possible.

This update highlights our ongoing efforts and achievements in environmental sustainability, while also providing a brief overview of our latest investments and product developments.

As a proud member of SEDEX, we actively share our audit reports with customers and suppliers. We also use the platform to monitor audit outcomes and assess the ESG (Environmental, Social, and Governance) performance of our supply chain. This ensures we work exclusively with credible, responsible companies that share our values on environmental stewardship, sustainability, and workforce welfare.

Zenith has been officially recognised as a carbon-reduced business by Carbon Footprint Ltd. We have engaged their services to independently assess our environmental data and produce an annual report. This report is publicly available on our website as part of our ESG disclosures and serves as the foundation for setting targets to reduce energy consumption and carbon emissions.

GREEN INVESTMENT

Variable compressors

We have just completed our compressor systems upgrade, with energy efficient variable speed compressors located at all our sites. This has reduced our energy usage, saving us over **100,000 kWh** of energy per annum, enough energy to boil 100 million cups of tea.

Ambient cooling

The installation of two ambient air cooling systems are now cooling the hot water from our printing presses before entering our chillers, reducing energy consumption by around **120,000 kWh** per annum and prolonging their lifespan.

Electric forklift trucks

Our fleet of forklift trucks is now **100%** electric. Along with reducing our carbon emissions it has created a cleaner environment for our employees to work within.

Recyclable packaging

Reducing our use of plastic packaging is a key target for us. We now use paper based packaging tape and **50%** less plastic pallet wrap of which 30% is recycled content.

ACHIEVEMENTS

Carbon Footprint

Our carbon footprint is assessed annually by Carbon Footprint Ltd. We are currently undergoing our third assessment and looking to build upon the reductions we made during the first two years.

Ecovadis

Ecovadis is one of the worlds leading and most trusted sustainability and ESG ratings platforms in the world.

Our score improved this year, now placing us in the **top 19%** of all company's globally. Our target for 2025 is to become a top 15% company and achieve silver status.

BPIF Health & Safety Seal of Excellence

We are proud to have recently been awarded the BPIF Seal of Excellence in Health & Safety, following a comprehensive audit of our management systems and site conditions.

Green Partnership

In January 2025 we became one of only a few companies in Europe to achieve a prestigious Green Partnership certification with one our key multinational customers.

PRODUCT INVESTMENT

Ricoh digital press

Our new digital press is our 7th Ricoh and will increase productivity by **30%**. It will also enable us to run heavier board and longer sheets.

Die cutter and collator

The Bograma rotary die cutter and card collator will open up new markets for us. We're now able to produce decks of playing cards, flash cards, game cards and many more.

Muller stitching line

Our latest stitching line is a Muller Martini Primera and is capable of running at **14,000** units per hour. This represents a **3x** improvement along with quicker setup speeds.

CAD table

An additional CAD cutting table has recently been added to our arsenal. Equipped with a stack feeder and delivery, it eliminates the downtime caused by manually changing sheets.

*Did you know, our company now has a total of **14** die cutting machines?
We can confidently say, that we're equipped to handle die cutting jobs of all sizes and volumes.*

PRODUCT RANGE

Retail packaging

Our retail cartons come in all shapes and sizes with a plethora of finishes to choose from. Highly recyclable and a great alternative to plastic.

Rigid packaging

3 years ago we entered the market of rigid packaging. We've now produced jobs from 10 to 100,000.

Collector packaging

We have an international reputation for quality collector packaging which we've established over the last 45 years.

Large format

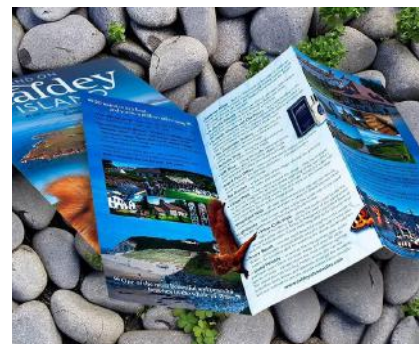

Banners, signage, POS, posters, window graphics and much more. We can print on many different substrates and carry out a professional installation.

Litho print

Leaflets, flyers, magazines, books, stationery. Saddle stitched, glue bound, foiled, laminated, embossed, die cut. The options are vast.

Digital print

Many of our Litho products can also be produced digitally which is an economic option for short runs but also has the advantage of personalising every print.

OUR PRODUCTS

Product Life Cycle

The majority of our products are made from **100%** recyclable materials, with paper and board sourced from sustainably managed forests.

When a tree is harvested, its primary purpose is to provide wood. However, the remaining materials are also put to valuable use—producing paper, board, and a wide range of other products—ensuring that no part of the tree goes to waste.

90%

of market pulp comes from certified forest management sources.

Paper and board rank among the most recycled materials on the planet, which is why more and more customers are turning to us for alternative, eco-friendly packaging solutions.

Recently, we collaborated with a customer to develop a plastic-free packaging alternative that still protects and secures their product. This successful innovation has eliminated **37 tonnes** of plastic annually from just one product line.

Our commitment to creating highly recyclable products through low-carbon operations not only reduces our own environmental footprint but also helps our customers reduce theirs too.

RESPONSIBLE SOURCING

Responsible sourcing is high on our agenda. We strongly believe that by incorporating this into our Integrated Management System for ISO 14001, 9001, and FSC® CoC, we can improve our working practices. Through regular, open dialogue with our suppliers, we

can exchange ideas and learn from one another. This approach encourages best practices and provides transparency within our supply chain. One example of this, is our take back scheme, where we will take back excess stock from our customers and either reuse or recycle the materials.
