# ECO WARRIOR PROGRAM

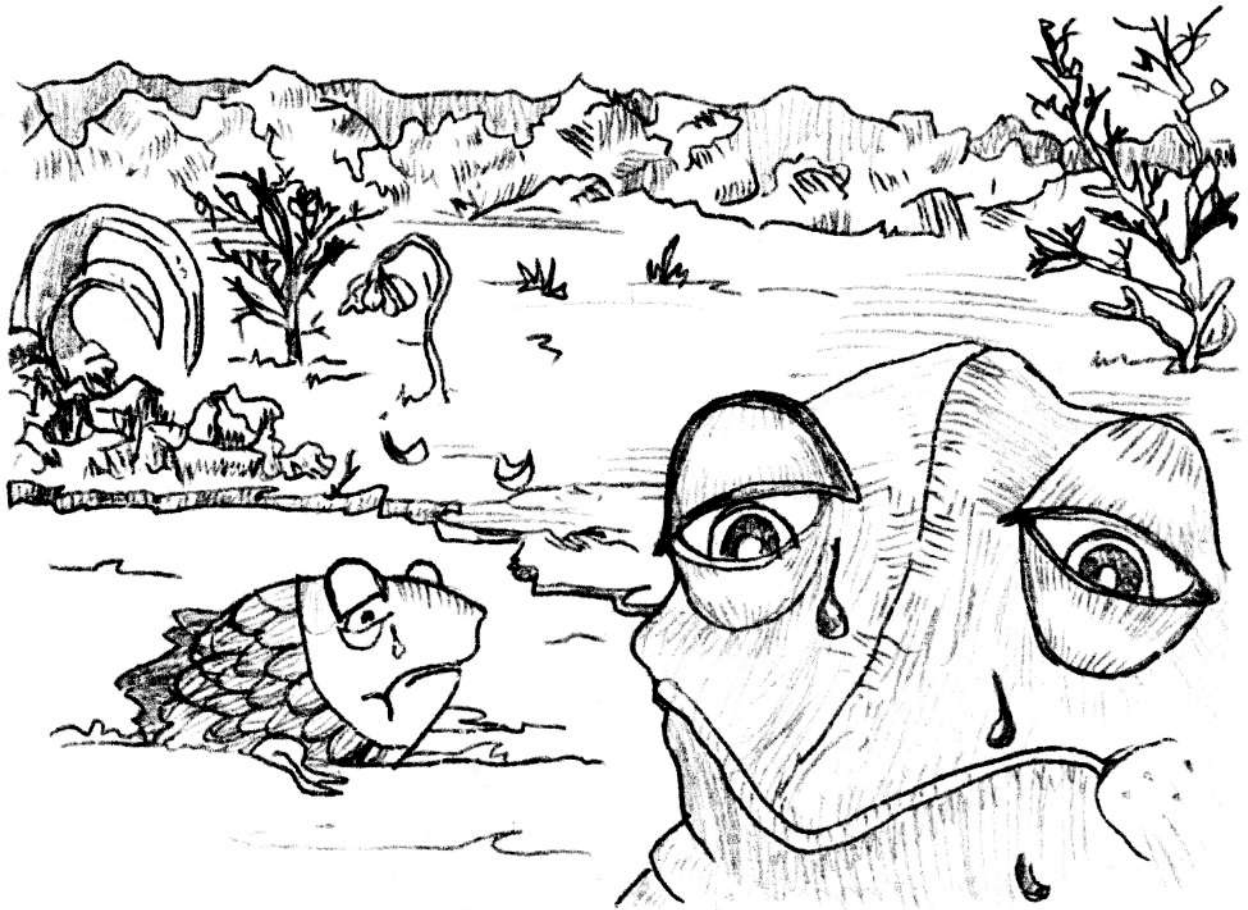

This is the story of our friends who were living in a river. Zuzu the frog, Wanda the fish, and Istara the dragonfly. Everything started when the plants in the lake began to get sick.

Every day that passed, the river was dirtier. Dark liquids were invading our waters. The flowers were dying and the trees were getting sick.

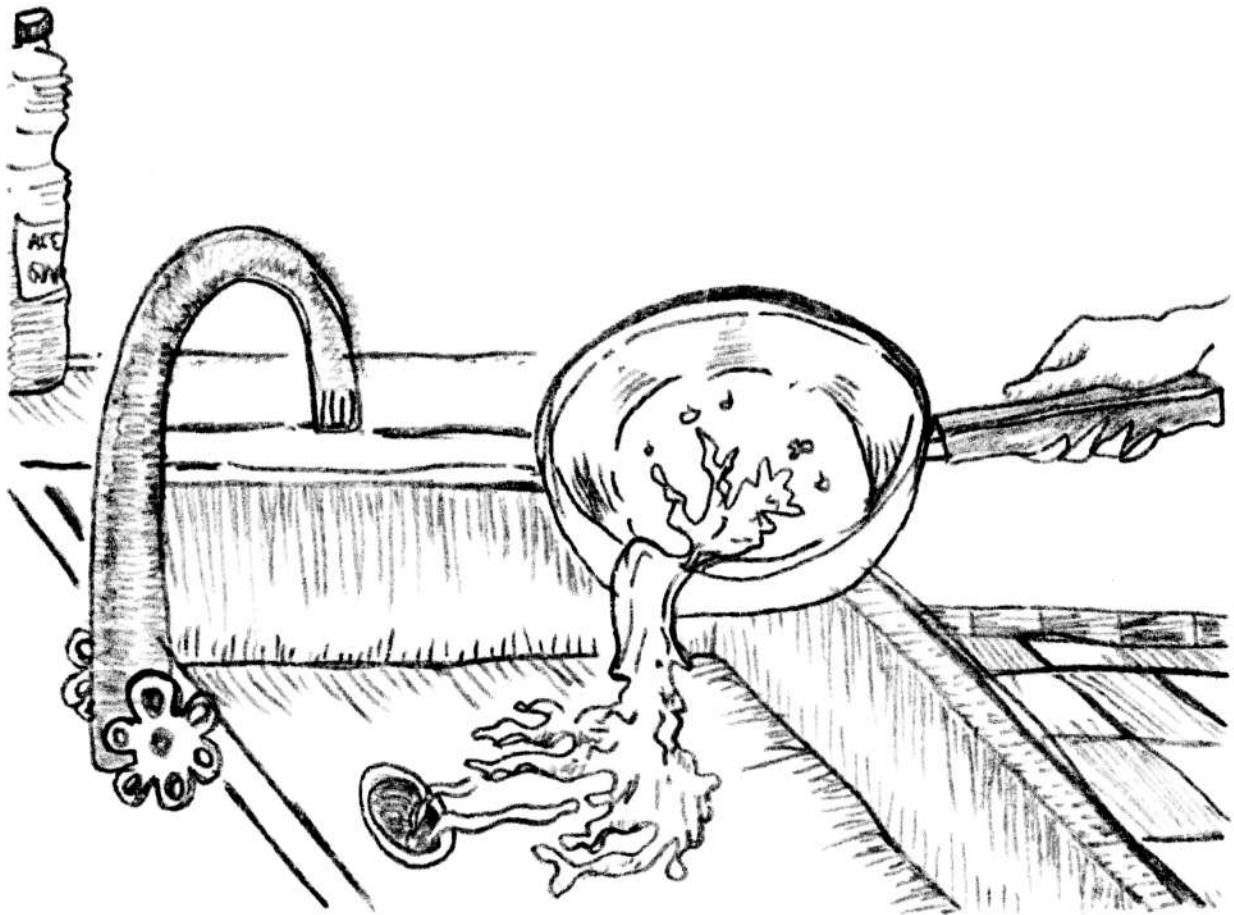

"What can we do?" the animals were asking themselves.

Istara the dragonfly says, "Hello friends! I know where all this dirt comes from. I visited the next-door neighbors' river and they have the same problem. But I know the solution!"

"The humans are the ones who pollute the river. After they cook, they throw their used oil down the sink and this oil is what is polluting our rivers," Istara the dragonfly explained.

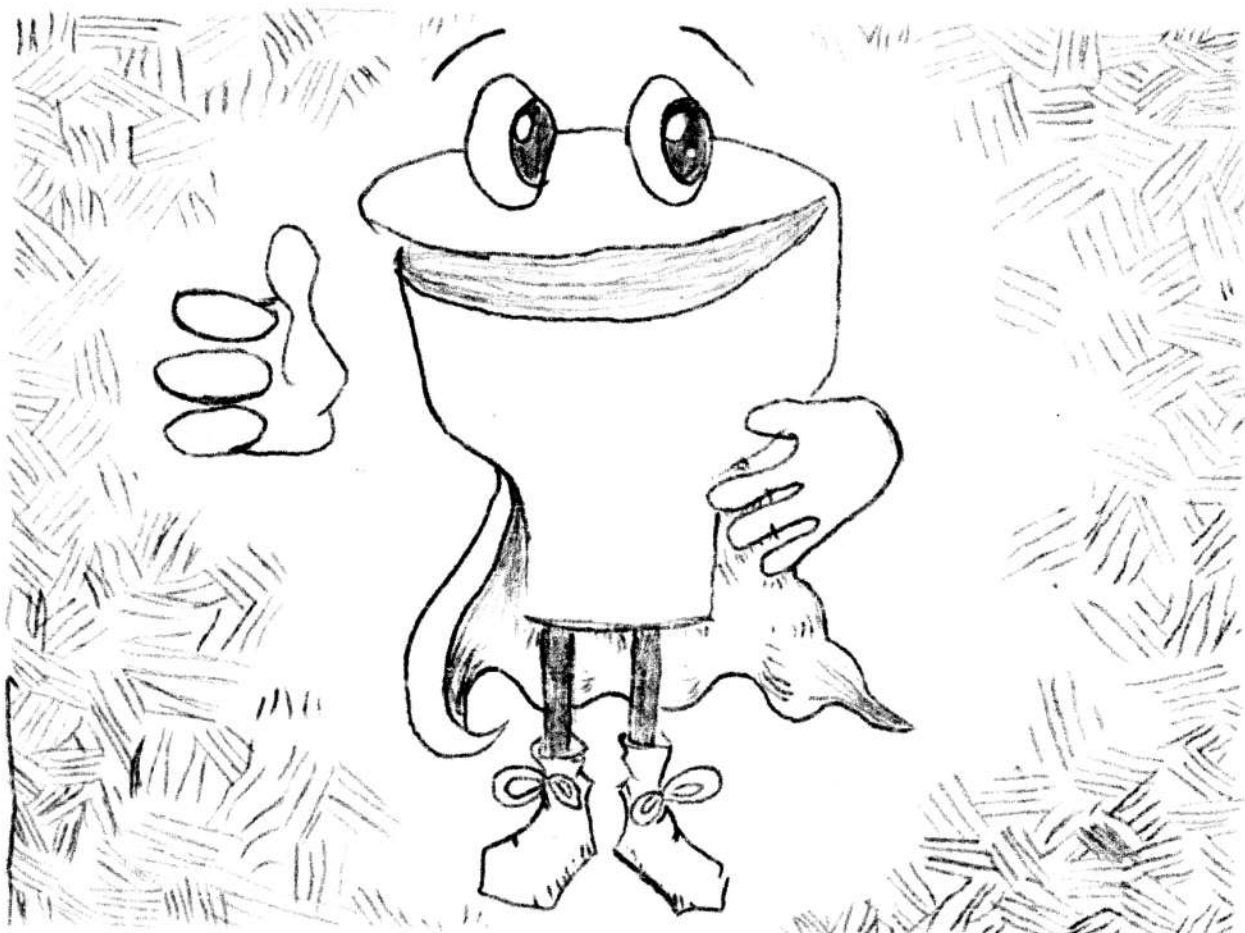

"You know what? One litre of oil contaminates 1,000 litres of water," Istara remarked.

Istara comforted the animals, saying "Don't worry. I know who can help fix this problem. I'm going to find our hero."

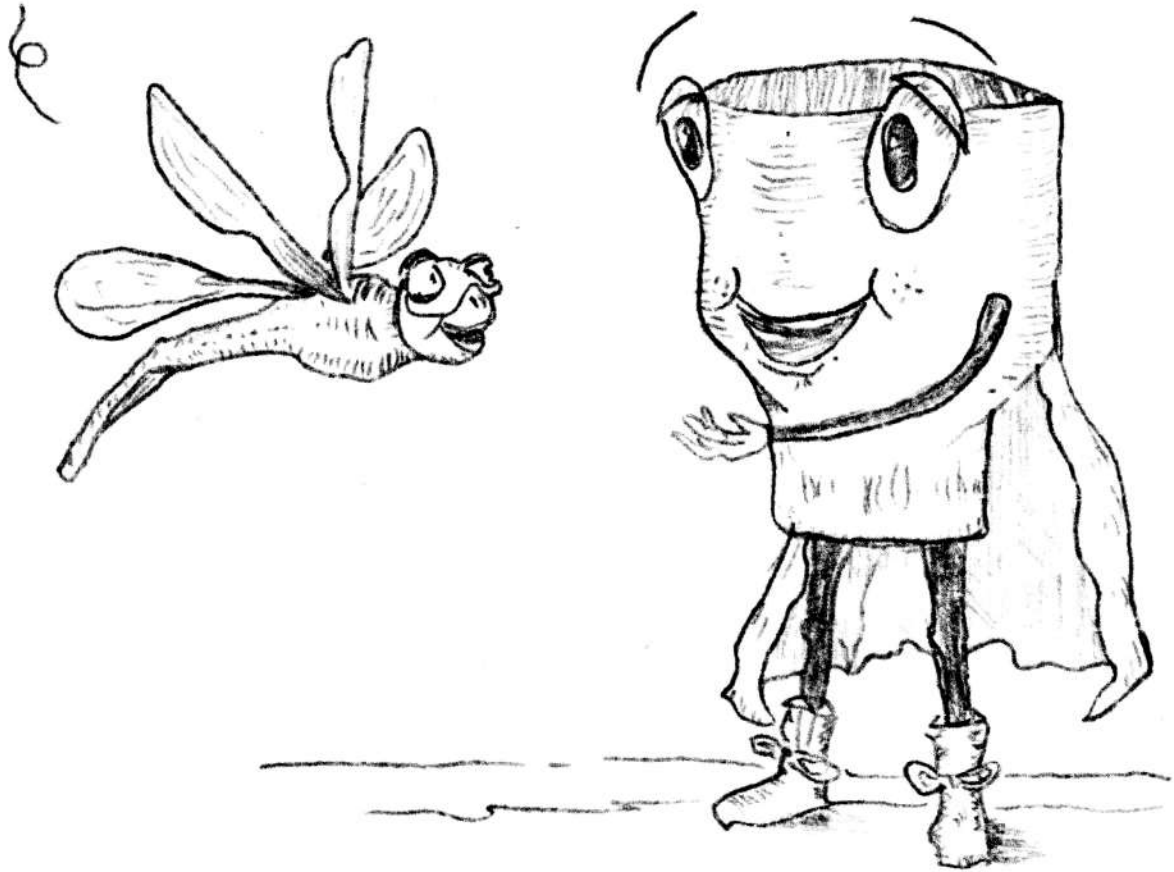

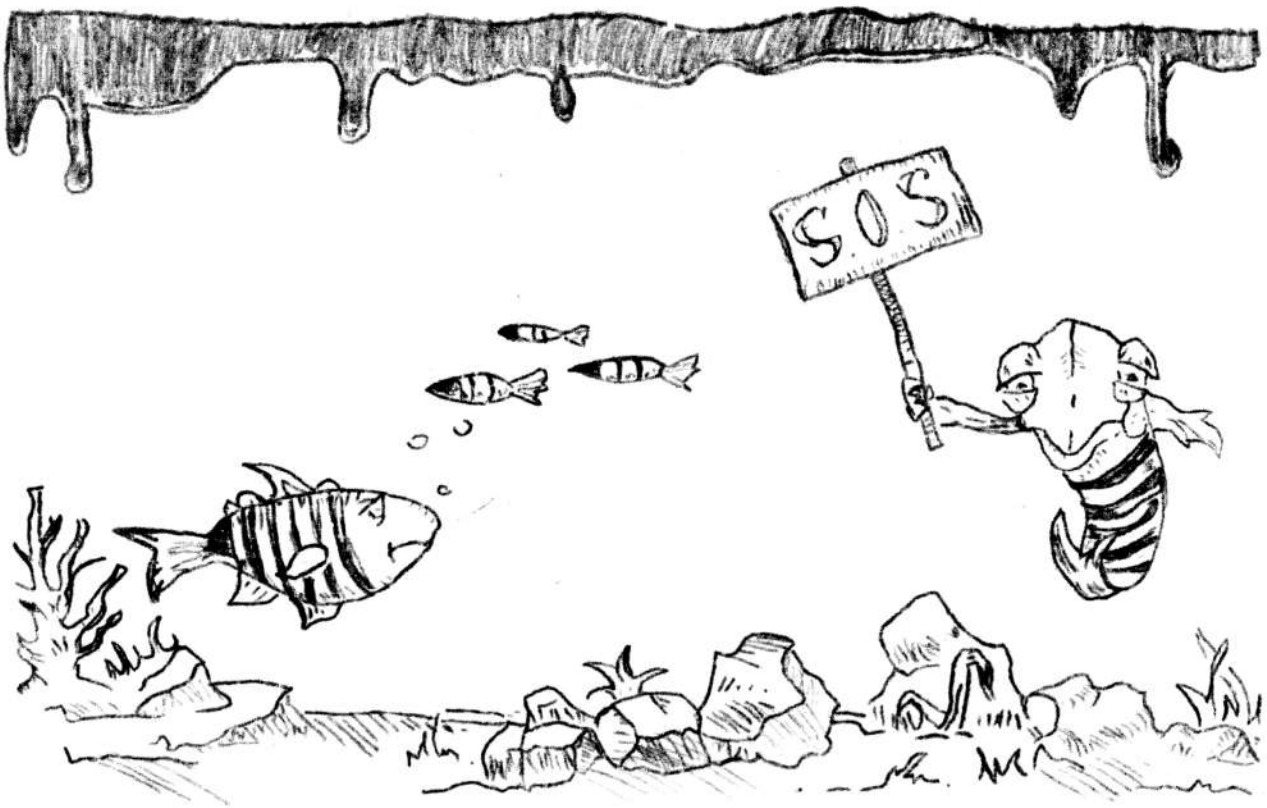

Introducing Super Phoenix!

"Hello Super Phoenix! We need your help. Our river is very dirty because the human's kitchen oil is contaminating it. We don't know what to do," says Istara.

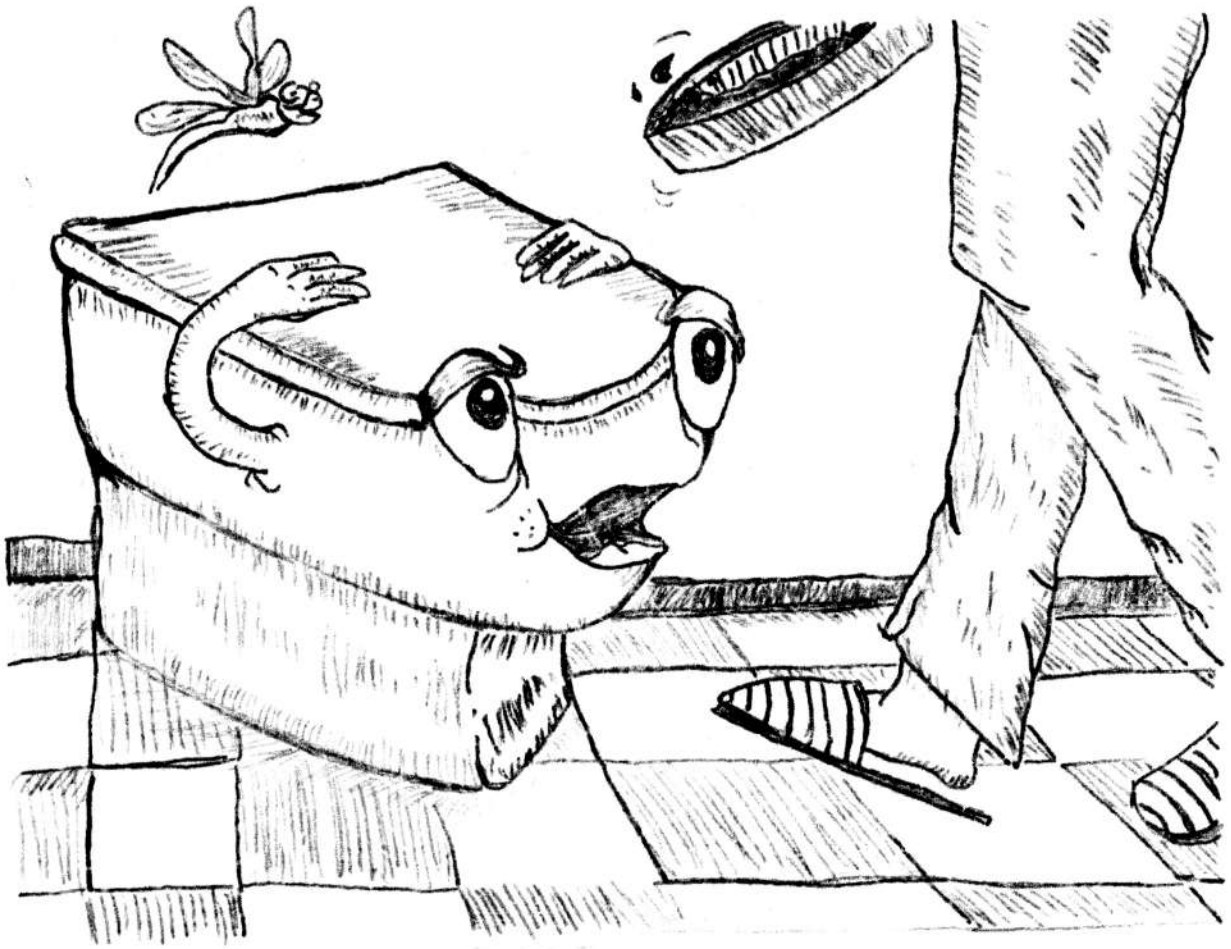

"We need to do two things!" says Super Phoenix.  
"First: Explain to everyone the hazards of not recycling kitchen oil. Second: Collect all the oil used in all the kitchens in the world!"

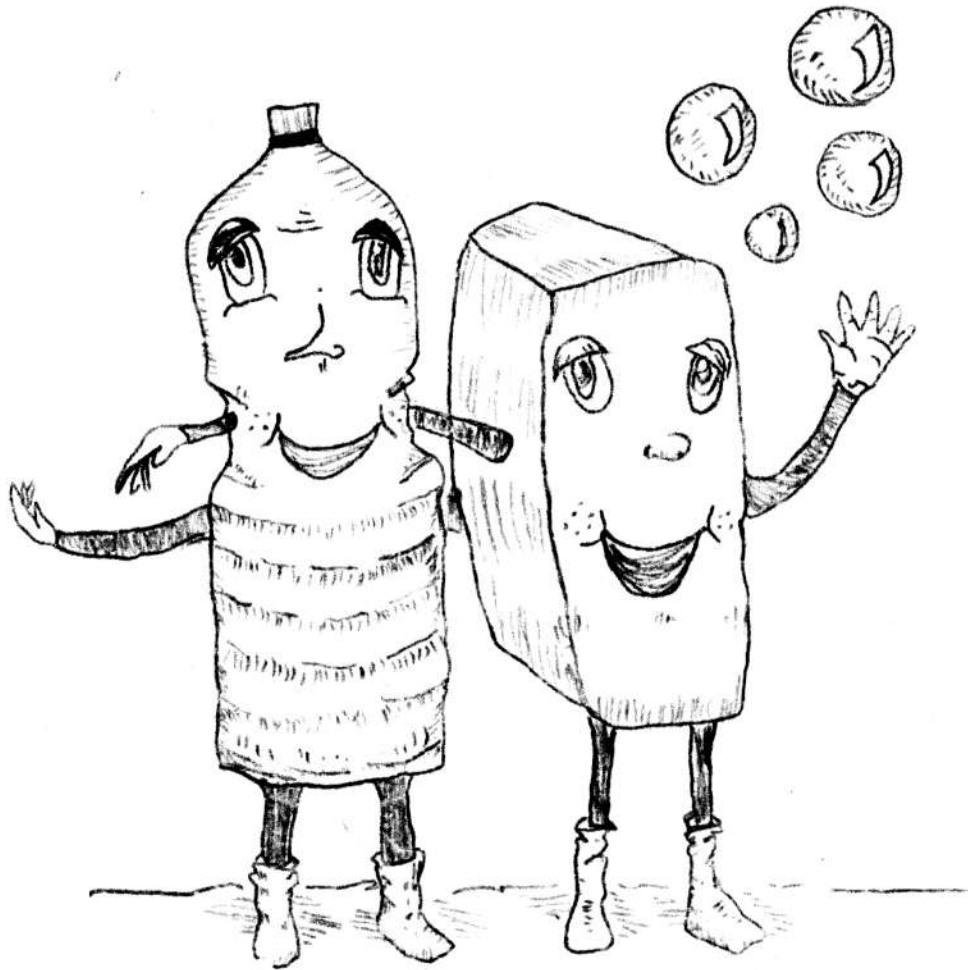

"You know what? If the oil comes in the river, it reduces the oxygen, provoking the death of all the living beings that live there," Super Phoenix warned Istara.

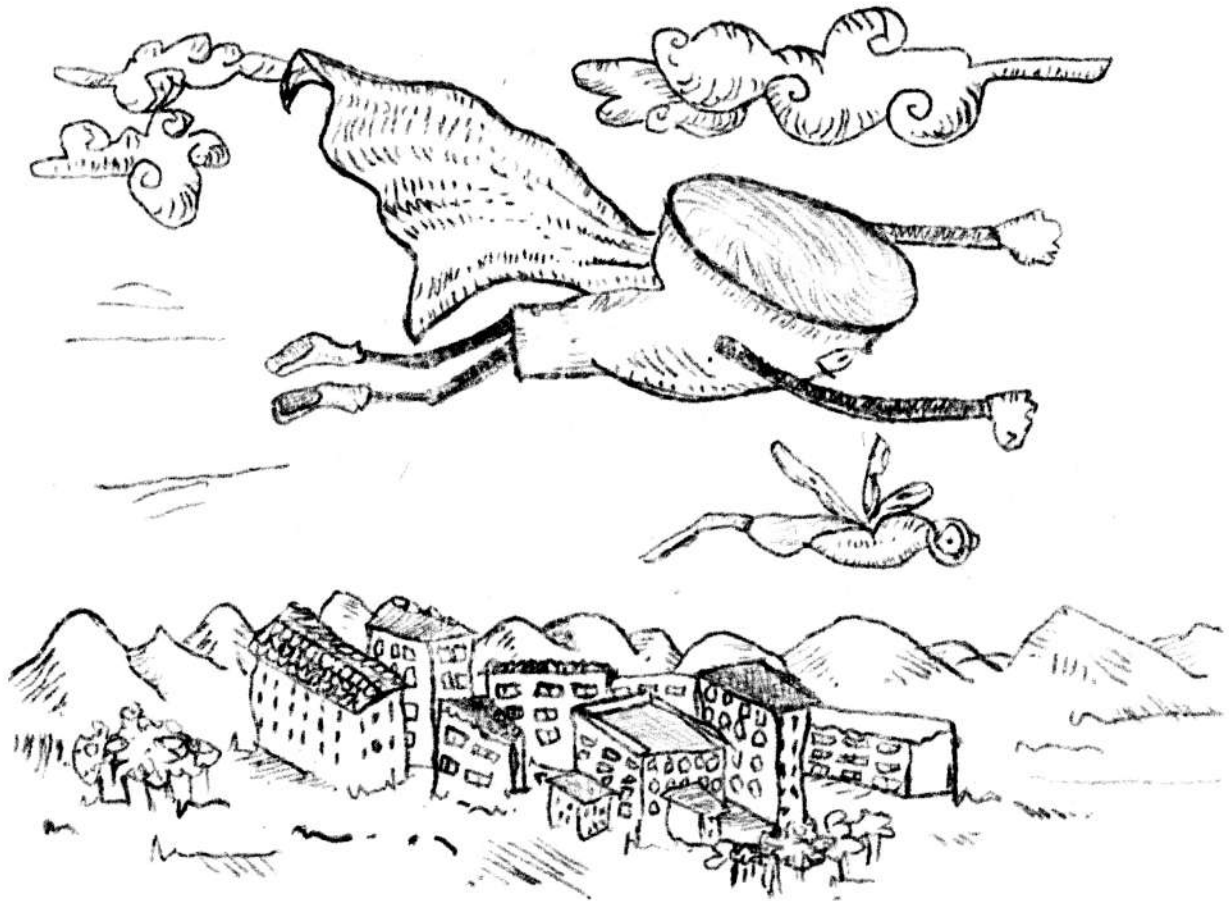

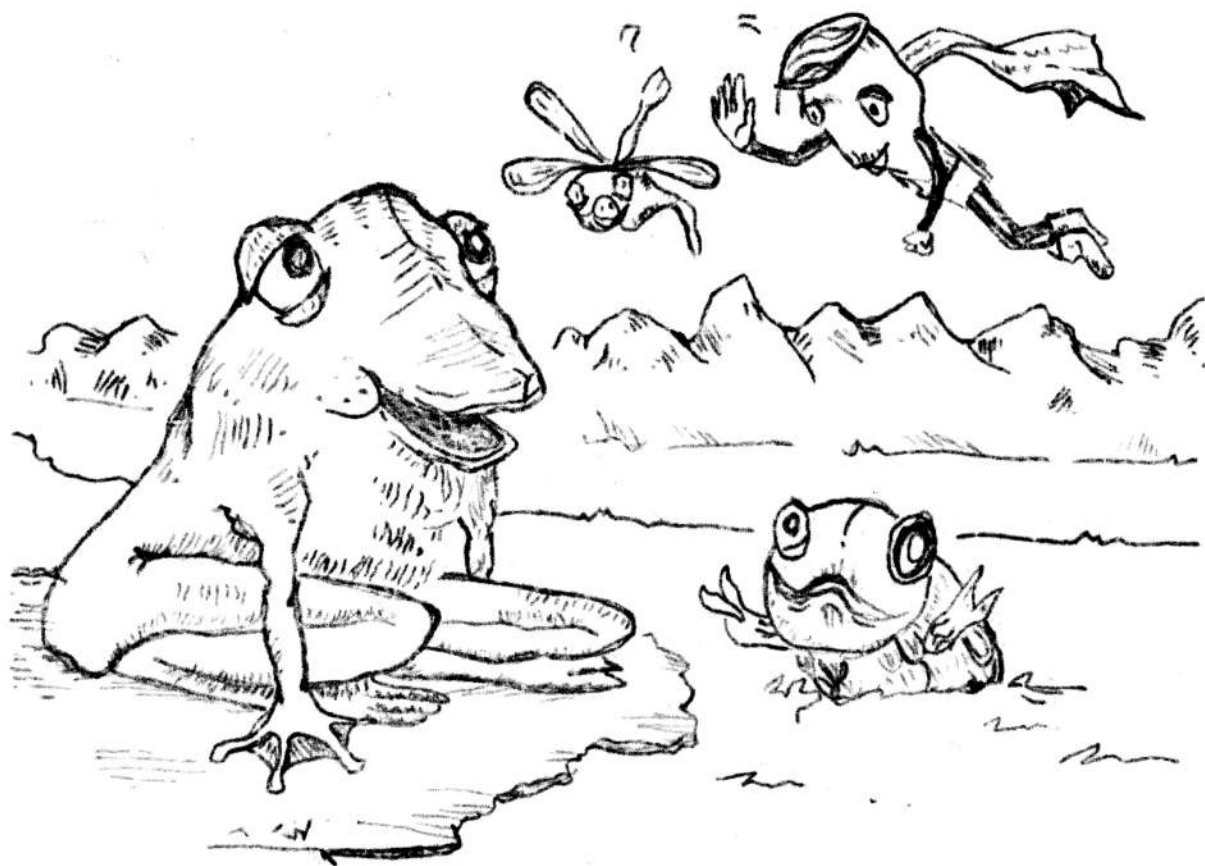

"We need to explain to everyone we cannot throw the used oil in the toilet or the sink. We need to recycle it!" is what Super Phoenix told Istara.

"Plus, with the used oil, the humans can make soaps, and other beneficial products!" Super Phoenix said enthusiastically.

"Now let's go. Take me where the lake is, and we will tell your friends there these solutions," said Super Phoenix to Istara.

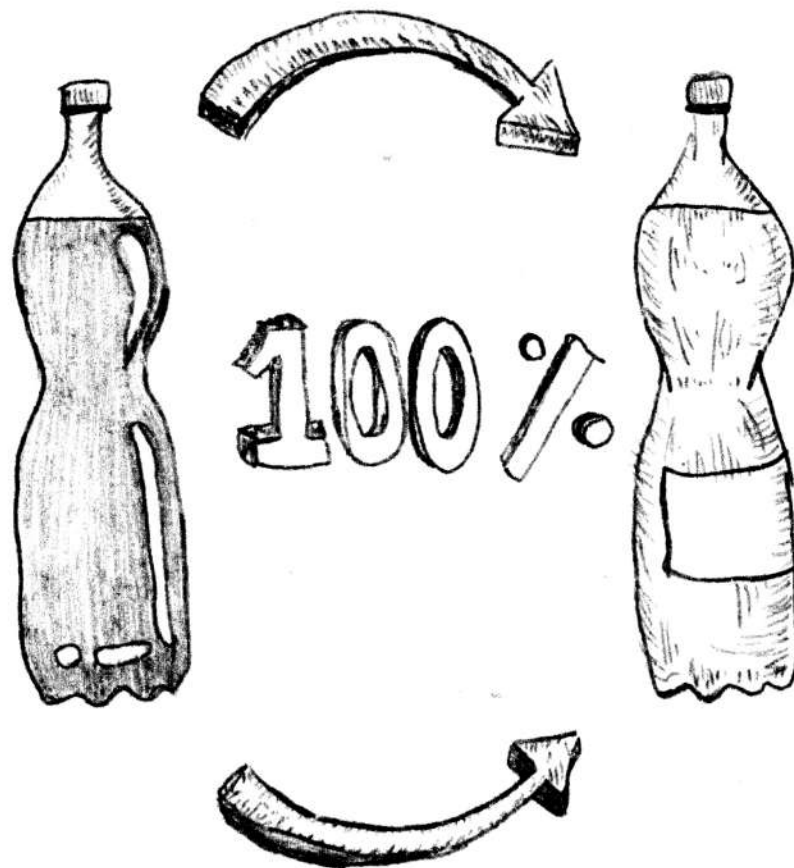

"Hello Zuzu and Wanda, let me introduce you to Super Phoenix! He will help us fix our pollution problem."

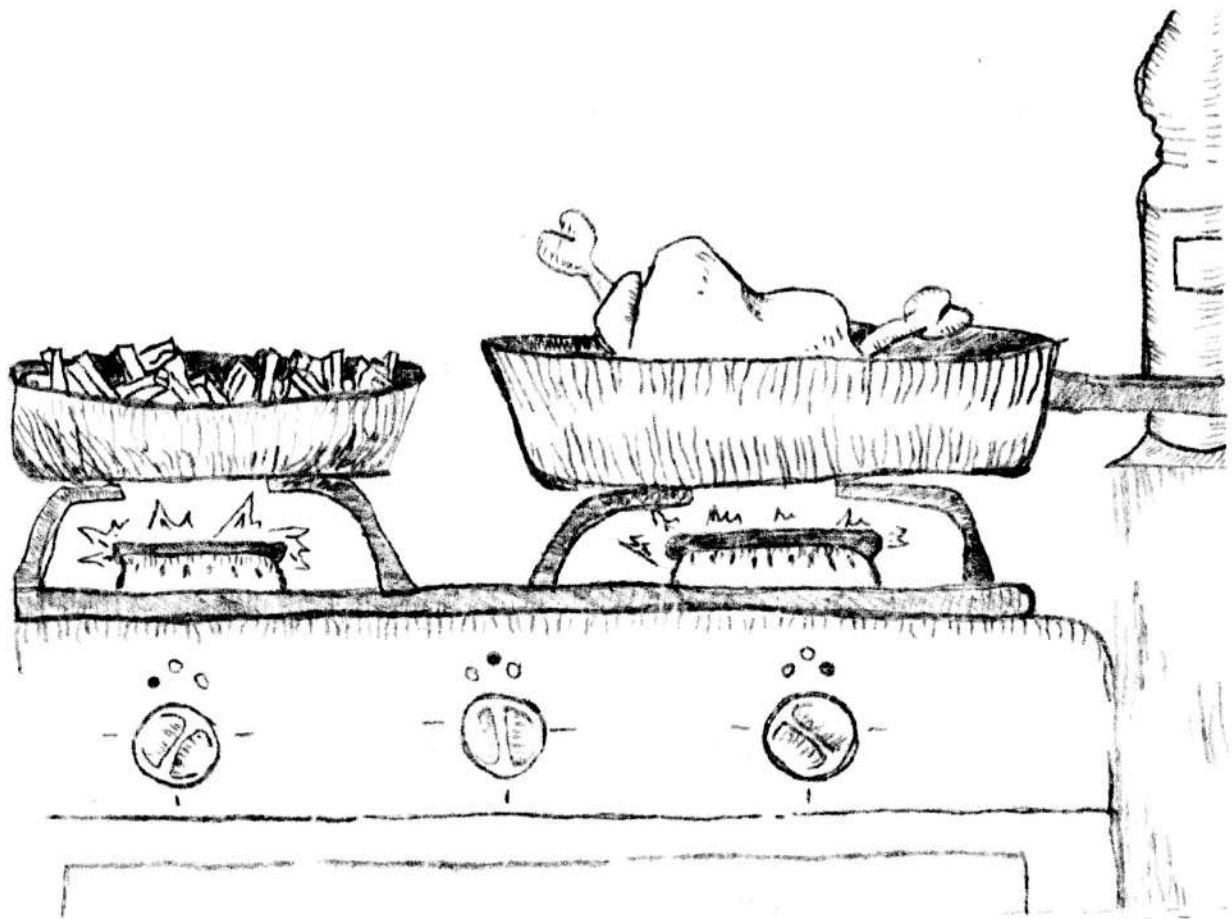

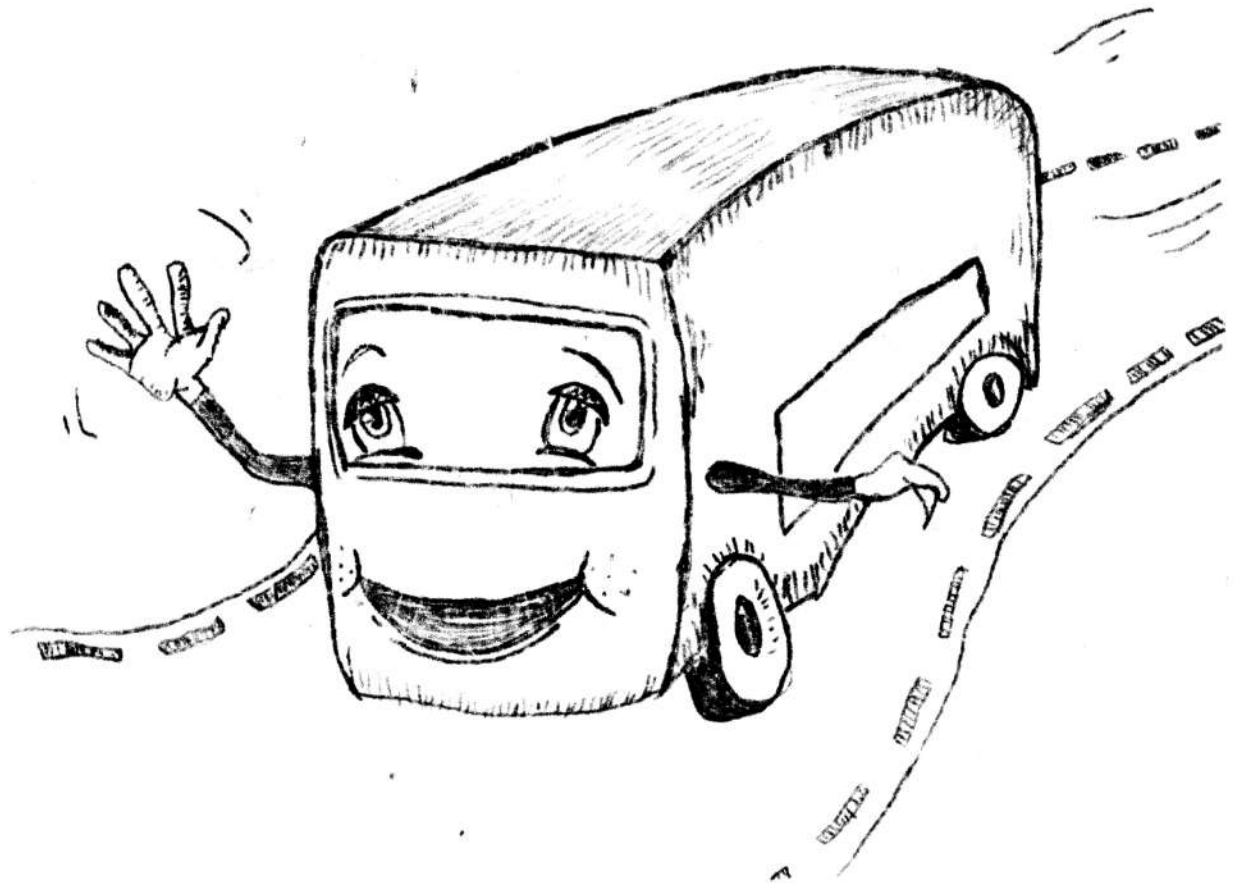

"We need to communicate to the humans the importance of recycling the used oil. It's the only way we can stop the pollution of our rivers," says Super Phoenix.

"We can recycle 100% of domestic used oil!"

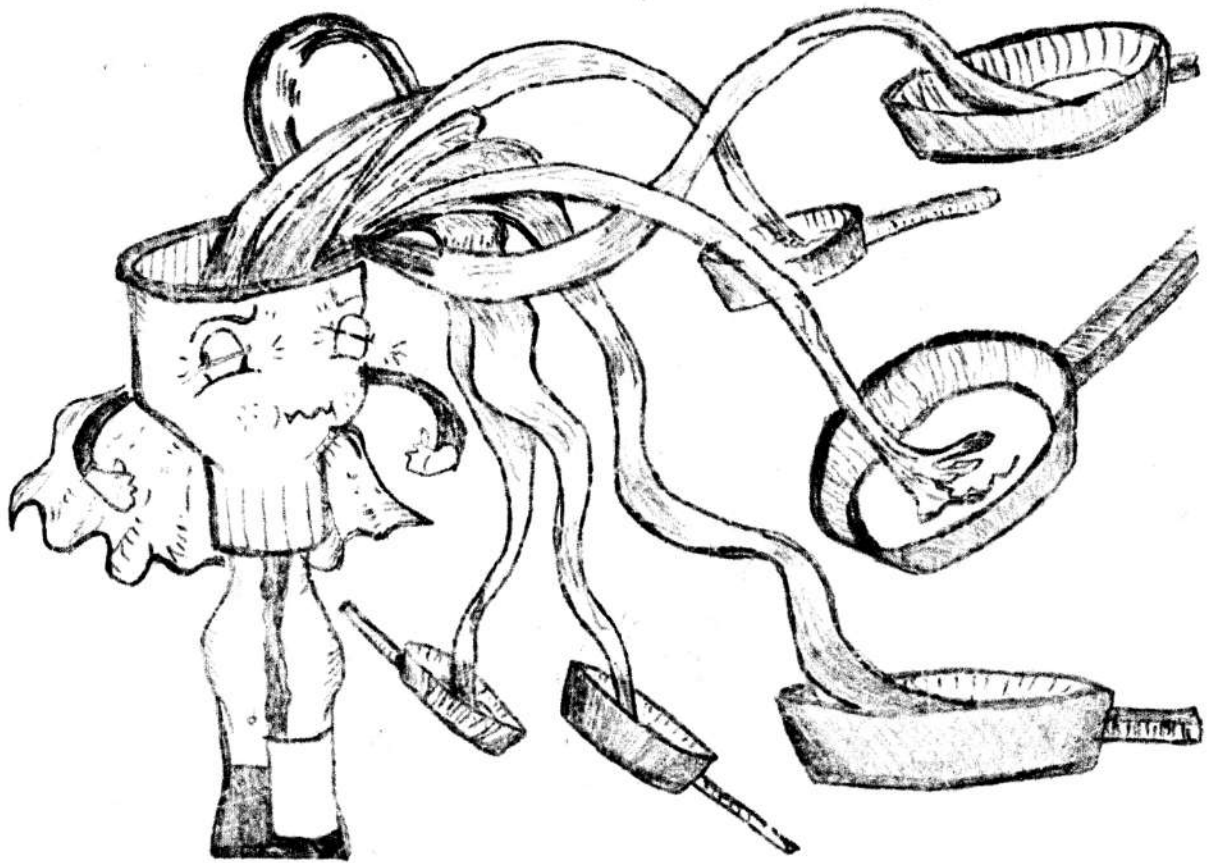

"At home, when cooking, we use oil to deep fry or heat food. We could collect that used oil instead of polluting the rivers."

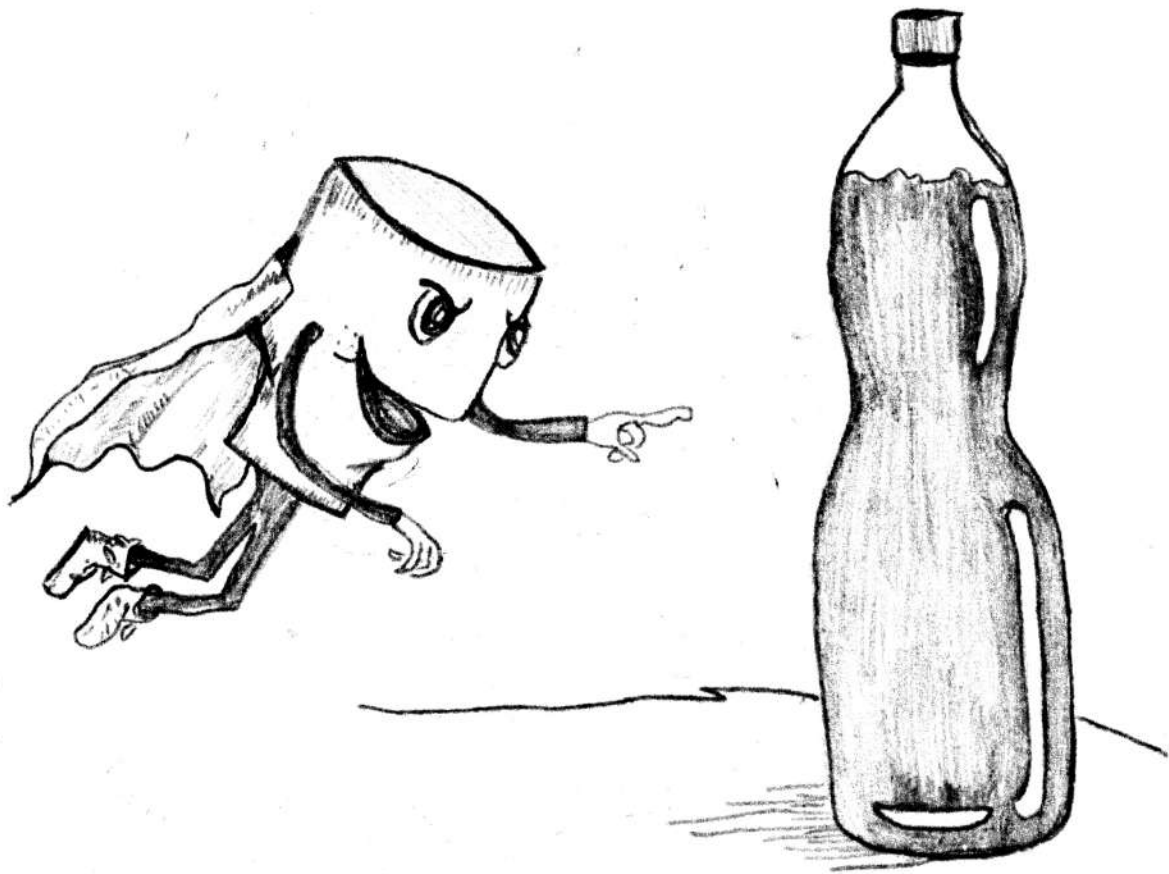

"Did you know that the bus can work with used cooking oil?"

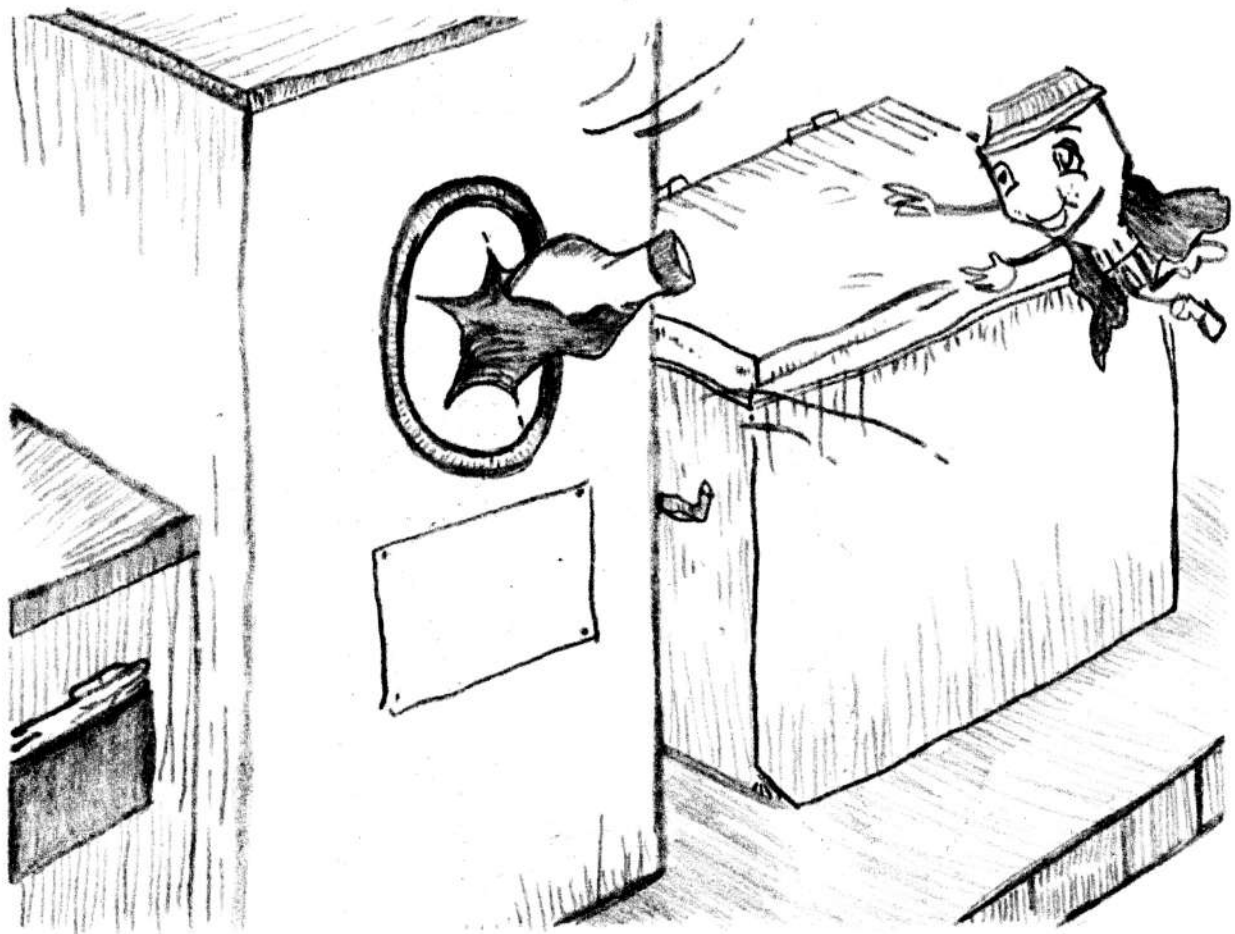

"The most important step is using the absorbing power of me, Super Phoenix, to collect used cooking oil."

"Ready! This used kitchen oil cannot contaminate any other river anymore!"

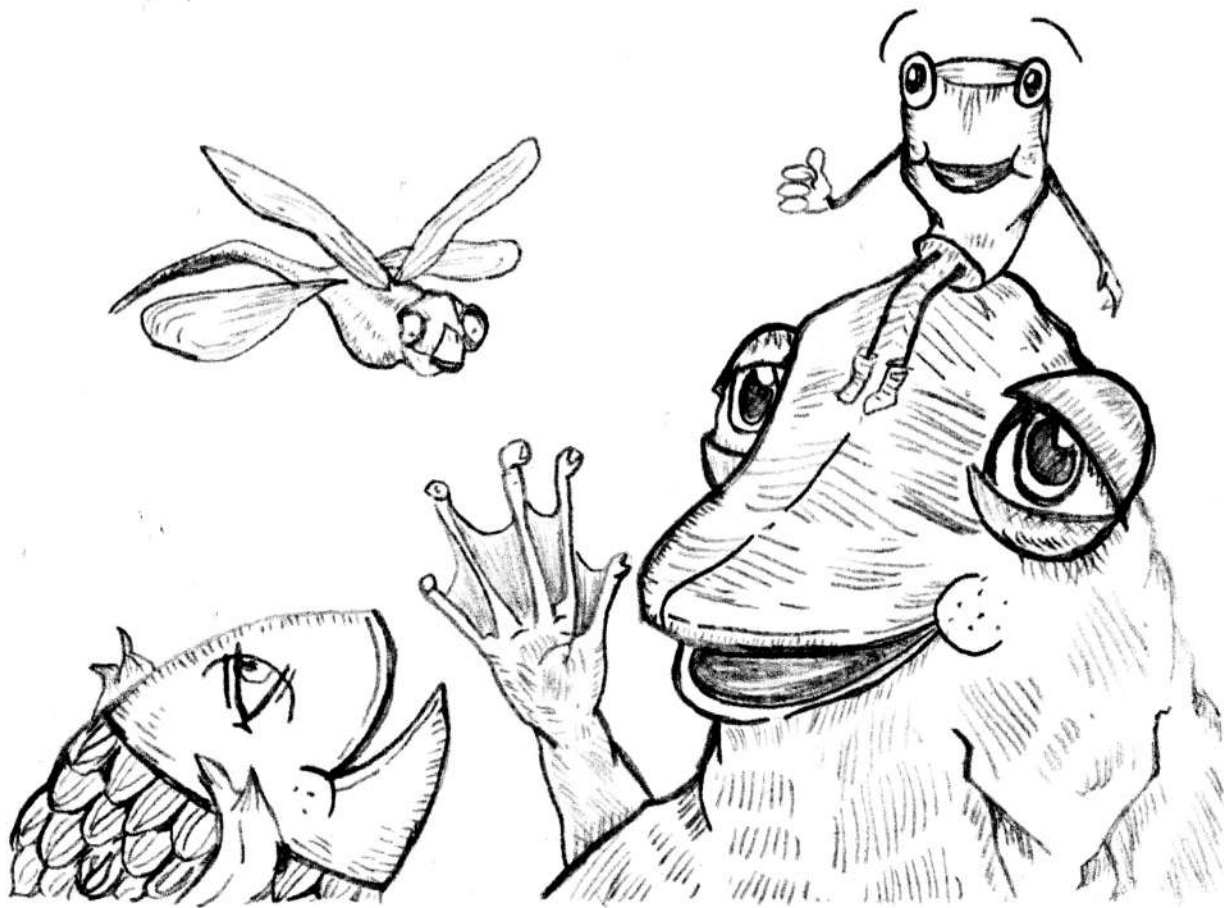

"Now, we throw away the kitchen oil bottle inside a container for recycling oil."

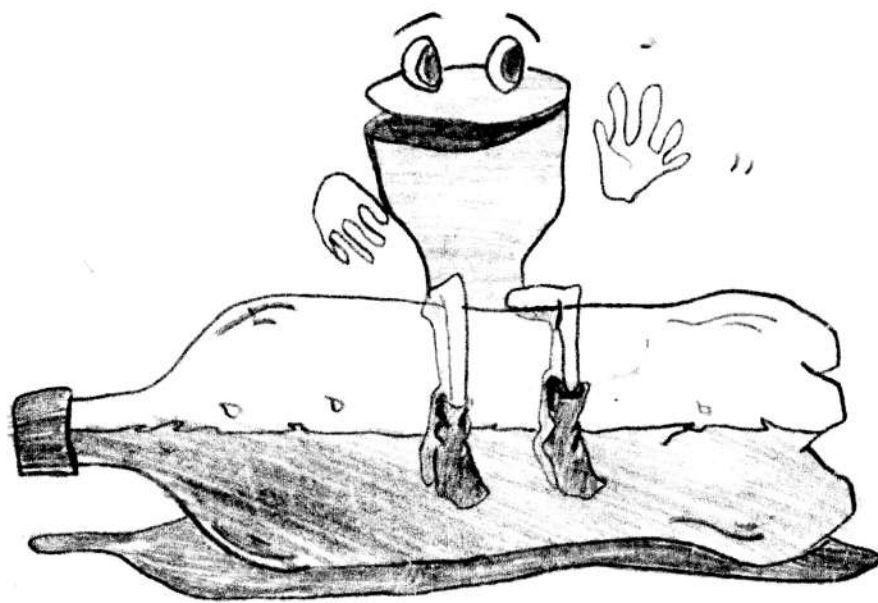

"Well done Super Phoenix! The life and joy has returned to the river! We can enjoy the clean and clear water again. Thank you Super Phoenix for helping us!"

"We did it!" the animals celebrated. "Help us to keep the rivers clean. Explain to everyone that we need to recycle the used kitchen oil. Thank you friends. See you!"

Recycling the kitchen oil is being respectful to the environment.
