JOIN

Available in planters, edging and seating, the Join modular system is constructed of marine grade aluminum or weathering steel. Ultra-versatile components bolt together to create an array of custom configurations. From curved walls to cascading garden systems, Join will bring a space together.

Join Edging

Join in use at 7200 Wisconsin Avenue in Bethesda, MD

JOIN /MODULAR

Join Modular is a system of connecting planter components designed to be fastened together, suiting a specific site plan or design. These components are each highly customizable, with variable dimensions in height, width and radius. The system includes four primary components that behave modularly to create one larger configuration.

Variable Corner

Right Angle Corner

Central Component

End Component

JOIN /EDGING

Join Edging is a system of single walled connecting components designed to be integrated together, suiting a specific site plan or design for enclosed or elevated landscaped areas. These components are highly customizable, with angles and curves, variable dimensions in height and width. The system includes four primary components that fit together modularly to create one larger configuration. Each component is reinforced internally for added strength, contributing to the whole once each part is fastened together.

Right Angle

Cap

JOIN /SEATING

A minimal approach to bench form. Made from marine grade aluminum and thermally modified ash, we've designed Join Seating to fit seamlessly into the Join Modular Planter and Edging systems.

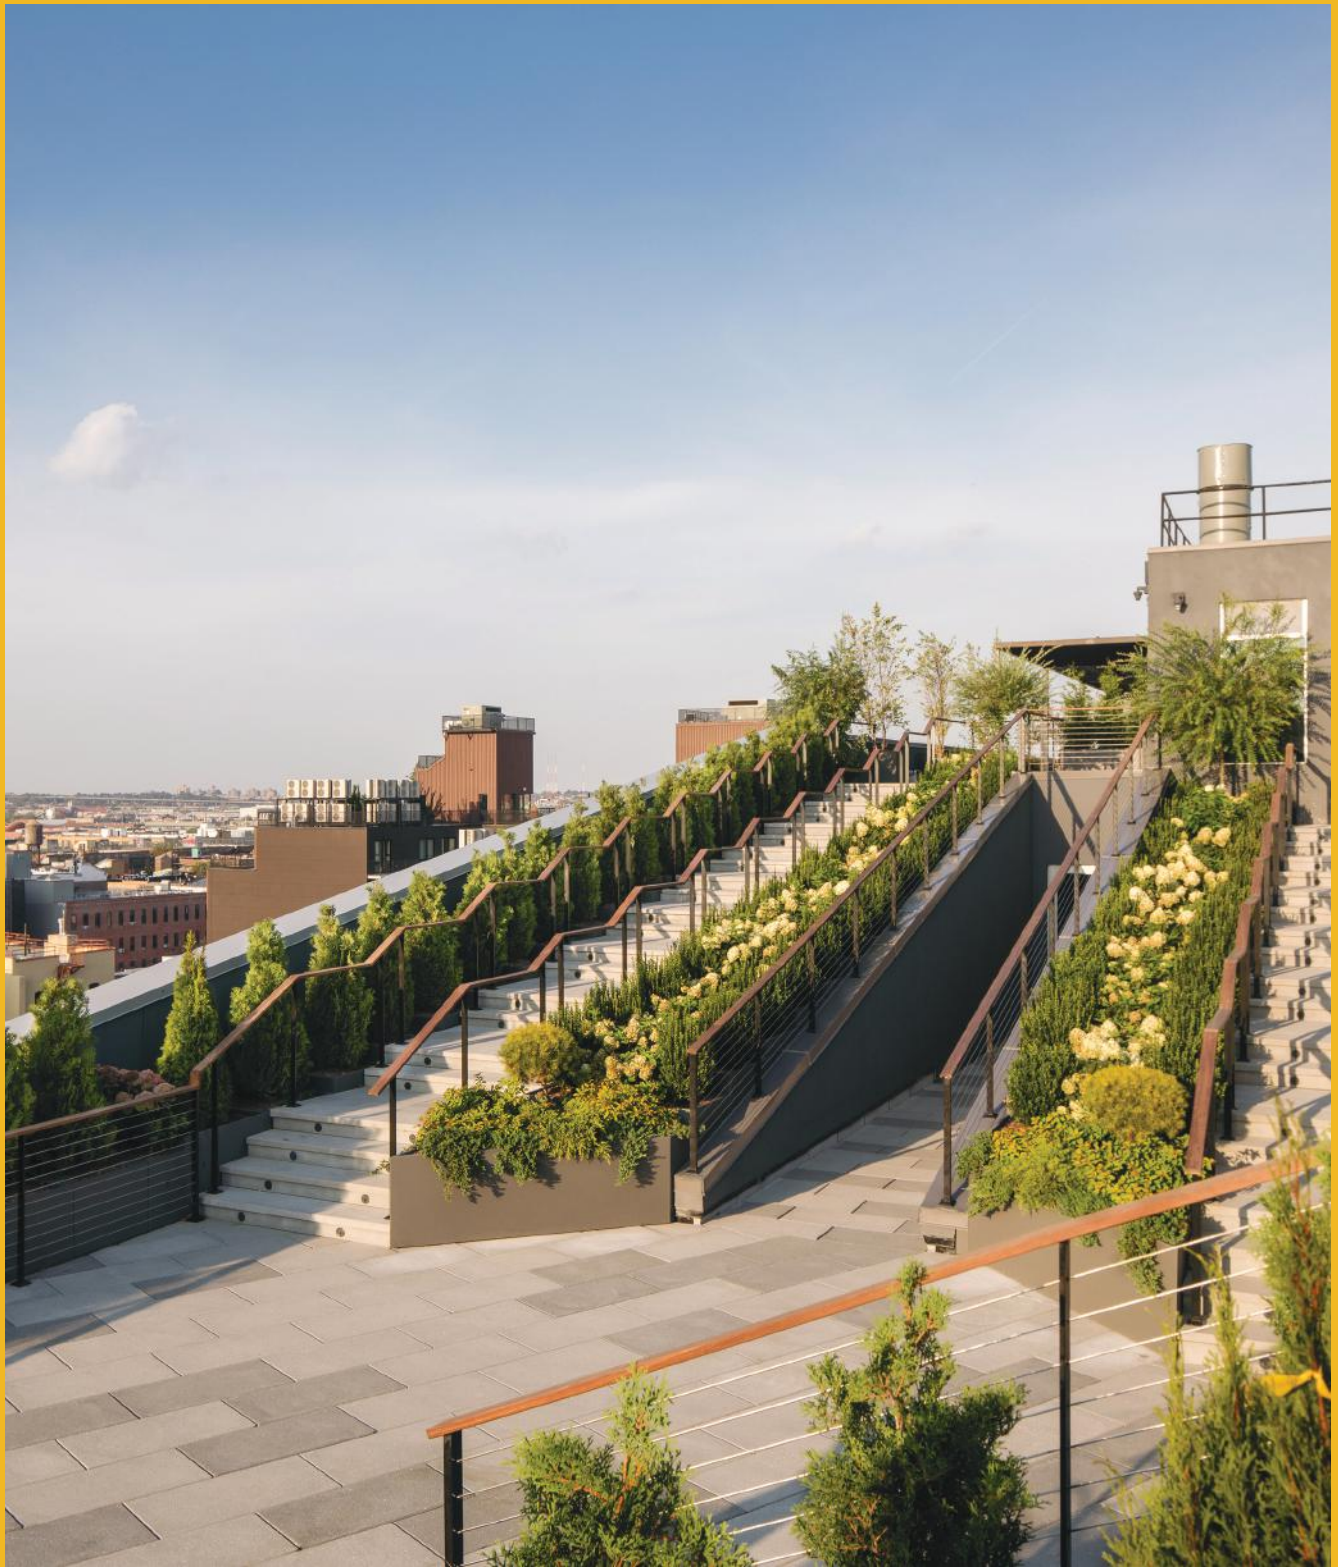

Front to back configuration allows for longer seamless bench tops.

End to end wood configuration runs the length of a bench up to 6', providing a subtle reveal between elements.

CUSTOM PLANTERS

A range of standard sizes and highly customizable planters in marine grade aluminum or weathering steel. Made to resist UV radiation and severe weather conditions. Aluminum planters are powder coated for durability. Elegant and timeless profiles are fully customizable in order to compliment a modern landscape.

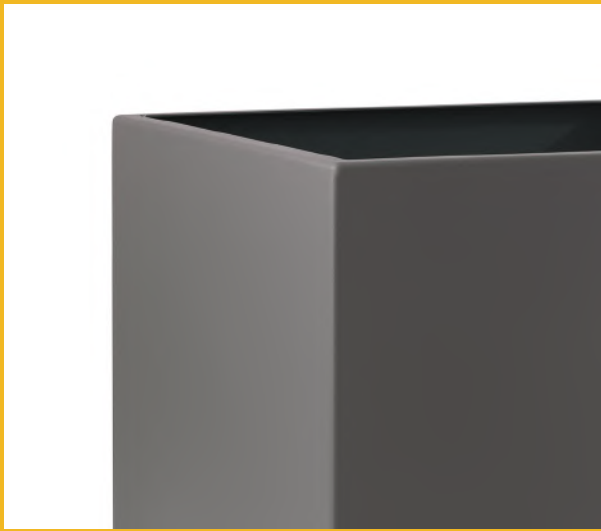

Planters Perfect at 10 Monticelli in Brooklyn, NYC

CUSTOM PLANTERS

Designed for durability and performance, our custom planters for commercial and residential projects are made from heavy-gauge, marine grade, recycled 5052 Aluminum Alloy that is also used for boat and ship building.

STOCK

Designed as an aluminum planter for the price of fiberglass with an incredible lead time of 1-2 weeks. Stock was developed to replace our discontinued overseas production of fiberglass planters. These aluminum planters are beautiful, light, and practical for use indoors and outdoors. Made entirely in North America at our manufacturing facilities on both the east and west coast, these sleek Aluminum Stock planters are made to order and are always available.

STOCK

A line of powder-coated aluminum planters in a range of set sizes. Made standard with drainage holes and available with or without a drip tray, Stock planters are suitable for indoor and outdoor use.

Wide Trough

FLATPACK

Flatten your shipping costs with a planter that ships flat and assembles in minutes. Dramatically reduce shipping costs and eliminate the need for craning to rooftop gardens during install. Finished in any color you can dream up, and custom built in a highly diverse range of sizes and shapes.

Ships flat, builds out beautiful

Flat Pack challenges the conventions of a traditional planter box

Custom fastening system

Polyurethane leveling feet

ECHO

Playfully abstract planters and seating. All-weather planter or seat is made from marine-grade aluminum and can fasten to the ground for public spaces.

Utilitarian form. Unobvious purpose.

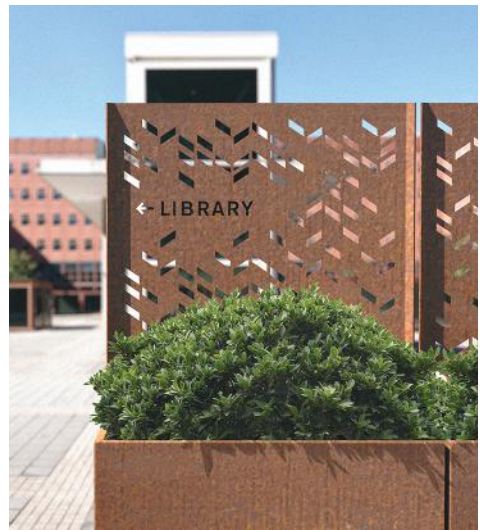

Three points. Playfully abstract.

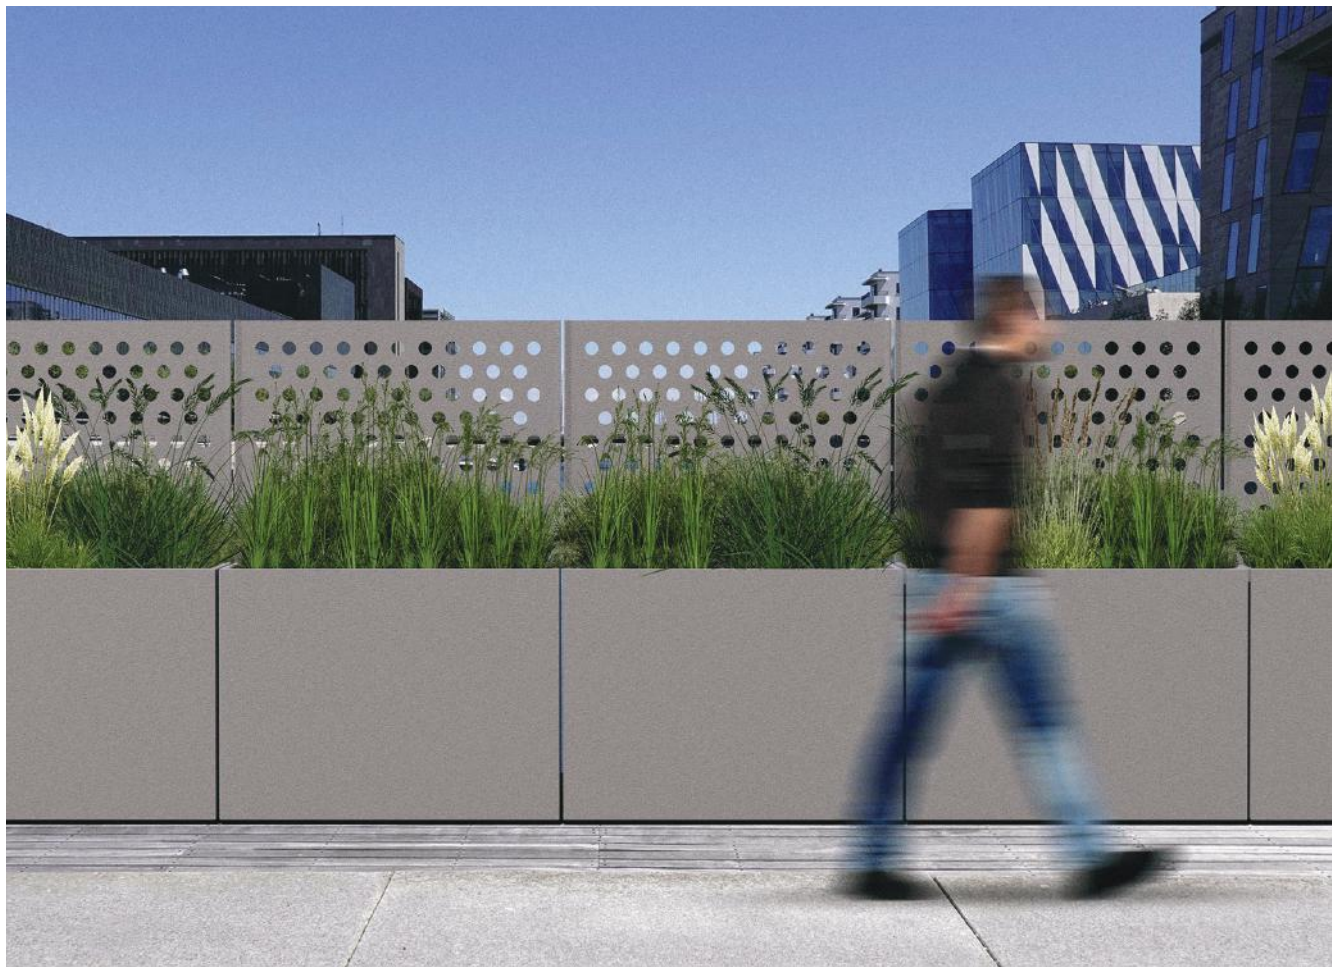

TRELLIS /BACKDROP

Backdrop combines planter and trellis in one unified product. Eliminating separate components that require assembly, backdrop requires less material and manufacturing time.

A fresh approach to a trellis privacy screen.

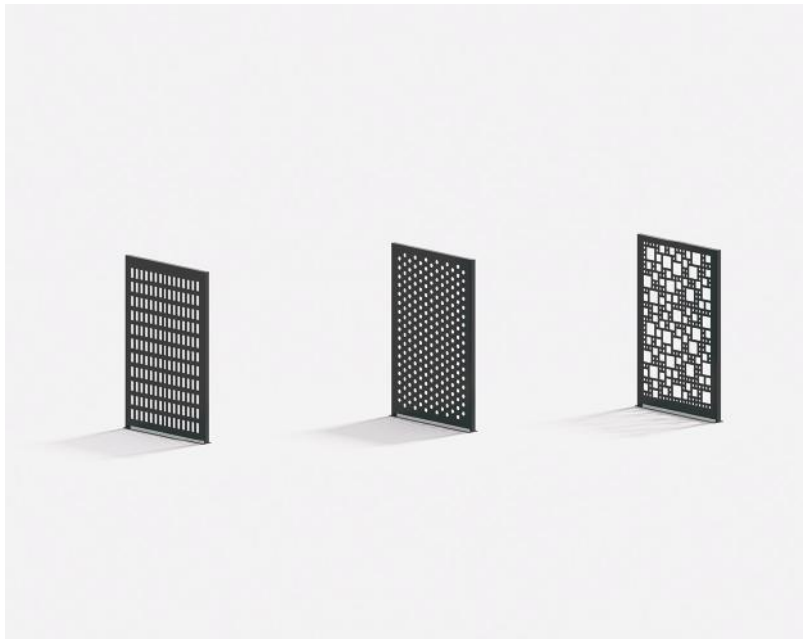

Simplistic in form, considered in design.

TRELLIS /PANEL

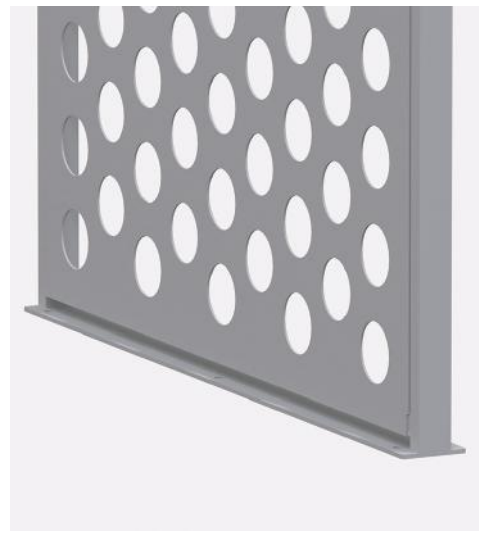

Panel is an outdoor partition structure that is modern and modular. Panel comes in two variations, Wall and Stand. The Wall profile integrates a mounting plate that runs the length of a panel without interruption, producing a minimal aesthetic at the base. The Stand profile allows for 8 inch clearance at its base.

Stand Panel with 8 inch clearance

Panel may be configured with various patterns

Wall Panel extends to the bottom

BENCH /VANCOUVER /BROOKLYN

A stand alone bench that reflects the city in a multi-functional way. Aesthetically hinting at a transparent and sophisticated cultural fabric, and simultaneously producing a bench that is perfectly fit for Vancouver's notorious seasonal weather.

Designed in collaboration with LM Studio & Studio Block, Vancouver Bench is an outdoor seating piece inspired by our home city.

An outdoor bench designed to be both durable and scalable. Available in three sizes, Brooklyn fits together beautifully in clusters, rows, and abstract configurations. Manufactured from marine grade aluminum and powder coated to suit.

OLLIE

Ollie reduces water consumption and promotes plant growth. Ollie makes it easy to care for plants and reduces the amount of times that plants need watering. A full range of sizes and configurations makes it perfect for all planter sizes and shapes.

EACH STEP
IN OUR
ASSEMBLY
PROCESS
CONSIDERS
THE PLANET

Reducing the use of energy and giving back to the earth helps us stay focused on creating products that compliment and honor the natural world. We use a marine grade aluminum that already contains 30-50% recycled material. While tropical hardwoods are common in our industry, we prefer a thermally modified white ash, harvested in America from growth forests created for durability and sustainability. We favor the powder coating process due to its lack of VOC's and energy efficiency, reduce CO2 emissions by 25-60% against conventional solvent-based coating systems.

TRAY

Made entirely from repurposed waste material, this powder coated tray is cut from a single piece of aluminum. Beautiful, durable and environmentally considerate objects you'll use.

TROWEL

Trowel was designed to be a comfortable and lightweight modern garden tool that is a pleasing addition to the garden bucket. 100% recyclable, it takes a modern approach to the classic trowel form.
