

# PROJECTIOLOGY & REURBEX

EXTRAPHYSICAL REURBANIZATION

November 12<sup>th</sup> to 15<sup>th</sup>

**FLY-IN EXPERIMENTS**  
STUDENTS ORIENTATIONS

# Welcome Everyone!

In this document, you will find **indications, techniques and information** about the *fly-in* experiments of the Projectiology & Reurbex course.

For more information about the event, visit: [reurbex.iipc.org](http://reurbex.iipc.org)

# Introduction

**Background.** “In January 1973, the parapsychologist Karlis Osis executed the Experimental project *fly-in*, or the experience of the out-of-the-body consciousness of volunteer projectors flying from the outside into the building of the *American Society for Psychical Research* (ASPR) in New York. The project started with the general call, covering the entire United States of America, of people who felt they could project themselves, at will, from wherever they were, to that address in Manhattan.” (Waldo Vieira – *Projectiology: Overview of the Experiences of Consciousness Outside the Human Body* – 10th edition – p. 953)

Karlis Osis  
*American Society for Psychical Research*

# Objective

**Objective.** Even with the placement of a target object to be accessed, different from the purpose of the fly-in performed by Osis, the Projeciology & Reurbex experiments, more than obtaining evidence, they aim to encourage students to leave the physical body in a lucid manner, to interact with the course's extraphysical team, with the *Interludio* extraphysical community and participate more actively in reurbex.

**Fly-in.** The *fly-in* experiments of this course will take place on November 13th and 14th 2021, in the morning.

# Fly-in Experiments

## zoom

**7:30 am to 8:00 am** – Students enter the virtual room.

**8:00 am to 9:30 am** – Introductory class with the Epicon (consciential epicenter) responsible for the fly-in (21/11/13 Marina Thomaz; 21/11/14 Mário Oliveira).

**9:30 am to 10 am** – Transfer to the room chosen to perform the experiment and preparing for the fly-in (see optimizations from page 8).

Important note: Turn off electronic devices (desktop, notebook, tablet, etc.) before going to perform the *Fly-in*.

# Fly-in Experiments

**10:00 am to 11:30 am** – *Fly-in* experiment (application of the *Projectional Factor Technique* – see description on page 12). Set alarm clock with soft tone alarm to return to the coincidence of the manifestation vehicles to the end of the experiment.

**11:30 am to 12:00 pm** – Students return to the virtual room. Completion of the projective form (Projectiography and Projectiocritique – the projective form is for your exclusive use, to optimize your self-research).

**12 am** – Lunch.

**2:00 pm to 4:00 pm** – Debate about the morning experiences with the Epicon responsible for the experiment.

# Optimizations

To get the most out of the experiments, use the following optimizations:

- On Friday (2021/11/12) and Saturday (2021/11/13) nights, try to sleep early to wake up rested the next morning. Focus on the event, in immersion course mode. If possible, read projective reports before going to sleep and perform mental saturation about the *fly-in* experiment and the place where the projective target will be set.
- Avoid expectations and maintain consciential openness. Value all parapsychic perception, however subtle it may be.
- Optimize your environment: clean sheets, pleasant room temperature, extra pillows to better support your arms and legs. Wear comfortable and loose fitting clothes. Make sure you won't be interrupted. Choose a quiet room to apply the techniques.

# Optimizations

- Lie on your back, with your arms beside the soma. Relax all your muscles, not forgetting those in your jaw, face and neck. This position facilitates exit from the physical body. Try it, insist a little! But if you feel the need to change positions, feel free to experiment with other projective postures.
- Avoid lying down with a very full or empty stomach. Eat a light morning meal and avoid caffeine or other stimulant drinks. Go to the bathroom before the experiment. The goal is to create a favorable physiological condition, in which the human body does not distract you.

**Tip.** To learn more about optimized projective postures, read chapter 205 of the treatise **Projectiology** (pages 440 and 441).

# Projective Techniques

FLY-IN EXPERIMENTS | STUDENTS  
ORIENTATIONS

# Projective Mental Saturation Technique

Daily, include appropriate saturating elements to promote mental impregnation with the idea of lucid projection. For example:

1. Read short projective report every day.
2. Read about the Interludio extraphysical community.
3. See photos of the location where the target will be placed.
4. Feed the desire to have a lucid experience and develop your projective skills.
5. Keep an open posture to have other types of projective experiences, such as extraphysical assistance work.

**Tip.** To learn more about the Projective Mental Saturation Technique, read chapter 232 of the treatise **Projectiology** (pages 483 and 484).

# Projective Factor Technique

The projective factor is the mental target, whether target object or specific target location, which is used as psychophysiological support for lucid projection.

- In the *fly-in* experiment, after lying down, focus your attention and imprint a strong desire to go to the place where the **target object** is placed, in order to identify it, and furthermore, access, from there, the *extraphysical community Interludio*. Try, at all times, to maintain a connection with the **extraphysical reurbanization** taking place on the planet.

**Tip.** To learn more about the Projective Factor Technique, read chapter 213 of the treatise **Projectiology** (page 452 and 453).

## Suggestion to Facilitate Discoincidence

If you have learned to mobilize your energies, you can do the Basic Mobilization of Energies as soon as you lie down on the bed. This facilitates the discoincidence of your vehicles and can also optimize the energies in the room in which you chose to carry out the experiment. If you don't know this energetic mobilization, simply relax and apply the projective technique.

# Projective Target

The **target object** of the experiment will be placed on the land where the *IIPC Campus* will be built, in *Foz do Iguaçu* city.

**Reminder.** Above all, in addition to the evidence, the experiments are aimed at stimulate lucid projectability, interaction with the extraphysical team of the course, with the *Interludio* extraphysical community, *and* participate more actively in the Extraphysical Reurbanization.

The IIPC terrain, where the projective target will be, is the blue trapeze.  
Coordinates:  $25^{\circ}33'31.2''S$   $54^{\circ}31'40.3''W$ .

# Projective Remembering

Some techniques help to **remember extraphysical events**. Here are a few hints:

- ✓ Try to remain immobile while awakening within your physical body. Avoid making sudden movements or turning on bright lights.
- ✓ You can gently move your head to the right (or to the left). Then focus your attention on any details or memory flashes.
- ✓ You can also, with a very gentle movement, place your index finger on your forehead.

# Projective Remembering

- ✓ Try to mentally replay the sequence of events or any key memories. Memories tend to consolidate more when they are reinforced by repetition.
- ✓ Keep pen and paper close to where you are lying down to write down your keywords. Writing also helps *unlock* memories.

**Tip.** To learn more about projective remembering techniques, read chapters 386 to 392 of **Projectiology** treatise (pages 753 to 761).

# Registration of Self-Experiments | Projectiography

**Self-parapsychism.** The scientific development of self-parapsychism requires collecting information about its progress and phenomena that take place. Therefore, taking notes is of paramount importance.

**Projectiography.** For each day of the *fly-in* experiment there is a projective form that you can fill in with information about your experiences. It is suggested to register everything, even when you do not remember extraphysical events. You can find the forms below.
