

# Baby Proofing Your House

*The Best Baby Proofing Tips  
You'll Need to Know*

# Hello!

As the doting parent, keeping your baby safe will be the top priority for you. As they grow, you will realize that protecting them from harm is a huge task. Even at home, there are multiple things that could hurt them, especially in their younger years. You will need baby-proof cabinets and cupboards, child safety locks, childproof doors, baby-proof drawers, and even child-proof fireplaces. This guide will help you figure out the perfect baby proofing products, and the best ways to understand how you can make your house safer for your baby.

# The Baby Room

- Get a cot that is of a safe height and meets proper safety standards.
- Don't keep pillows, heavy blankets, stuffed animals or anything that could potentially be suffocating within the cot.
- Make sure that the nightlights in the room are not within reach of the kids and that they do not get too hot.
- Use a belt to strap your baby onto the changing table securely.

# Around the House

- Baby-proof switches and use protective covers over all electrical outlets around the house.
- Use safety gates at the top and bottom of the stairs.
- Keep all medicines, chemicals, cosmetics, and hazardous substances in containers that are outside of the kids' reach.
- Cupboards, cabinets, and other drawers should have child-proof latches. See [cutesycup.com](http://cutesycup.com) for useful lock protectors and baby-safety products.
- Use floor rugs that are slip-proof.
- Keep surfaces clean and remove any dust that accumulates. Do not keep items that can easily break on surfaces that kids can access.

- Make sure that no tiny item which can fit inside their mouths lie around the house.
- Something that can reduce the impact should cover all sharp corners and handles.
- If the walls have flaky paint that can be easily peeled off by kids, remove them. Remove small hanging items or pictures that could fall easily.
- Use guard rails in balconies and window guards on windows. Keep cords from shutters and other appliances beyond reach from the kids.

# Outside the House

- If you have a garden, make sure that the kids are not allergic to any of the plants.
- Make the front steps of the house slip-proof.
- Make sure that your kids do not have allergic reactions to your pets' fur as well.
- Always keep all the fences and gates surrounding your house secure.
- Do not leave rustic or sharp equipment lying around in the premises.
- When riding in the car, use a car seat and buckle in your child safely.
- Use child locks on the doors and windows of the car.
- Sun shields on windows will protect from excess exposure to direct sunlight.

## Other safety tips

- Restrict access to any area around the house or inside which has potentially harmful items, especially if you cannot make it safe in any way.
- Smoke detectors and carbon monoxide detectors in the right places are useful to alert you of smoke, fire, or gas. Always keep them all in good in working condition and checked by a professional.
- Have a first aid kit handy at all times. Keep it in a place that is easily accessible for you and store bandages, ointments, painkillers, cotton etc. in it.
- Do not let your child play with water or in the bathroom unsupervised. Make sure that your water stays below 50 degrees Celsius at all times.
